The Origins of Efficiency Brian Potter, 2025-10-14 An examination of how production processes from penicillin to steel to semiconductors get more efficient over time and a powerful argument for efficiency as an underrated driver of progress Efficiency is the engine that powers human civilization It's the reason rates of famine have fallen precipitously literacy has risen and humans are living longer healthier lives compared to preindustrial times But where do improvements in production efficiency come from In *The Origins of Efficiency* Brian Potter argues that improving production efficiency finding ways to produce goods and services in less time with less labor using fewer resources is the force behind some of the biggest and most consequential changes in human history With unprecedented depth and detail Potter examines the fundamental characteristics of a production process and how it can be made less time and resource intensive and therefore less expensive The book is punctuated with examples of production efficiency in practice including how high yield manufacturing methods made penicillin the miracle drug that reduced battlefield infection deaths by 80 percent during World War II the 100 year history of

process improvements in incandescent light bulb production and how automakers like Ford Toyota and Tesla developed innovative production methods that transformed not just the automotive industry but manufacturing as a whole He concludes by looking at sectors where production costs haven't fallen and explores how we might harness the mechanisms of production efficiency to change that The Origins of Efficiency is a comprehensive companion for anyone seeking to understand how we arrived at this age of relative abundance and how we can push efficiency improvements further into domains like housing medicine and education where much work is left to be done

Control in Bioprocessing Pablo A. López Pérez, Ricardo Aguilar López, Ricardo Femat, 2020-03-10 Closes the gap between bioscience and mathematics based process engineering This book presents the most commonly employed approaches in the control of bioprocesses It discusses the role that control theory plays in understanding the mechanisms of cellular and metabolic processes and presents key results in various fields such as dynamic modeling dynamic properties of bioprocess models software sensors designed for the online estimation of parameters and state variables and control and supervision of bioprocesses Control in Bioengineering and Bioprocessing Modeling Estimation and the Use of Sensors is divided into three sections Part I Mathematical preliminaries and overview of the control and monitoring of bioprocess provides a general overview of the control and monitoring of bioprocesses and introduces the mathematical framework necessary for the analysis and characterization of bioprocess dynamics Part II Observability and control concepts presents the observability concepts which form the basis of design online estimation algorithms software sensor for bioprocesses and reviews controllability of these concepts including automatic feedback control systems Part III Software sensors and observer based control schemes for bioprocesses features six application cases including dynamic behavior of 3 dimensional continuous bioreactors observability analysis applied to 2D and 3D bioreactors with inhibitory and non inhibitory models and regulation of a continuously stirred bioreactor via modeling error compensation Applicable across all areas of bioprocess engineering including food and beverages biofuels and renewable energy pharmaceuticals and nutraceuticals fermentation systems product separation technologies wastewater and solid waste treatment technology and bioremediation Provides a clear explanation of the mass balance based mathematical modelling of bioprocesses and the main tools for its dynamic analysis Offers industry based applications on myco diesel for implementing quality of observability developing a virtual sensor based on the Just In Time Model to monitor biological control systems and virtual sensor design for state estimation in a photocatalytic bioreactor for hydrogen production Control in Bioengineering and Bioprocessing is intended as a foundational text for graduate level students in bioengineering as well as a reference text for researchers engineers and other practitioners interested in the field of estimation and control of bioprocesses
