

The Dyson Air Multiplier™ fan has no need for visible fan blades.

Bladeless is More

Fluid flow simulation advances acclaimed new fan design.

By Richard Mason, Research, Design and Development Manager; Frédéric Micolat, Senior Fluid Dynamics Engineer; and Robin Pitt, Fluid Dynamics Engineer, Dyson Research Design & Development Center, Malmesbury, U.K.

Released to wide international recognition in 2009 — including being named to *Time* magazine's list of best gadgets — the Dyson Air Multiplier™ fan is a both technical and stylistic re-imagining of the household fan. By accelerating air over a ramp, the design eliminates fan blades as well as the buffeting and turbulence associated with these household appliances. From the outset, however, Dyson engineers faced the challenge of developing and optimizing the design of an original new fan without the benefit of previous experience with this type of design. Historically, the company relied on physical prototyping for design development, but resulting cost and time constraints limit the ability to evaluate hundreds

of design candidates needed to optimize a new product. To complement experimental testing and reduce development time for this new fan, Dyson's engineers used fluid dynamics software from ANSYS to evaluate up to 10 different designs per day.

The idea for the Dyson Air Multiplier fan originated when the engineering team was testing the Dyson Airblade™ hand dryer. This drying device works by generating a thin sheet of air moving at 400 mph that pushes water off the user's hands. Observing the side effect that the sheet of air was dragging a considerable portion of the surrounding air with it, the team conceived a new idea: to produce a thin, high-speed sheet of air
