Simulation and Control Dr. Devendra Potnuru, Electric motors is necessary for all most of all practical systems and becoming integral part in everybody life of modern living It is hard to imagine that there are more than 700million electric motor drive systems of various sizes are operational throughout the world In the last few years conditions have been changed in adjustable speed drives due to wide spread use of power semiconductor devices with available ratings up to 6000V and 3000A without even connecting series or paralleling the devices The present competitive development in the solid state devices control systems and signal processing all over the world result in significant progress in performance of AC drives and decreasing the overall drive cost In order to meet different practical applications various types of motors such as synchronous motors induction motors DC motors switched reluctance motors from several milliwatts to millions of kilowatts The Permanent Magnet Brushless DC BLDC motors have been emerged in wide areas of real world applications due to their higher power density good dynamic performance and ease of control Further the motor has high efficiency over a good speed range In this book simulation of BLDC motor drive and its control is elaborately discussed and is useful for students and faculty members to understand the simulation and control aspect of BLDC motor drive

Variable Gain Control of Brushless DC Motor Control with Low Resolution Sensors Chung-Hsiang Wang, 1999 In this work feasibility of using low cost low resolution sensor for high performance brushless dc BLDC motor speed control is investigated Conventional control using a tachometer or high resolution encoder suffers from drawbacks such as high cost large physical volume and high sensor processing bandwidth On the other hand sensorless BLDC motor appealing in its hardware simplicity does not provide sufficient fast performance Using a standard low resolution sensor such as a hall sensor or commutation encoder a compromise between cost and performance can be obtained However the use of a low resolution sensor does pose a challenge to the control design the sensor signal is discrete and speed dependent Together with the nonlinear drive voltage speed characteristic of the motor control of the BLDC motor requires a more advanced algorithm than fixed gain control This thesis presents a speed dependent control scheme to produce optimal performance The characteristics of the control scheme is first assessed by numerical simulation based on the mathematical model of the BLDC motor This is followed by experimental verification of the BLDC motor From the available data it is concluded that speed dependent control provides significant advantages over fixed gain control when low resolution sensor is used
