

INSTALLATION METHOD FOR MAIN STUD KITS

Part Number: 224-5000 **Application:** Chevy Cam 1976 Series small block

1. To assure proper thread engagement and accurate initial settings, clean ALL threads in the block. Clean the threads (pressure wash or Thread Chaser)
2. Clean and inspect all hardware prior to installation. Look for obvious defects or shipping damage. (Use proper fit, length and direction)
3. Remove studs (if the studs were never fitted) from the block.
NOTE: A LOCKTITE MAY BE USED IF A PROFESSIONAL INDUSTRIAL OR THE STUDS IS RECOMMEND.
THE FASTENERS, HOWEVER, MUST BE TORQUED PROPER TO THE LOCKTITE INSTRUCTIONS.
4. Install the main caps and washers for timing or misalignment
5. Lubricate the stud threads and the nuts with AAMP UL-TRAL TORQUE FASTENER ASSEMBLY LUBRICANT. These caps and nuts are the studs and tighten them from front side. AAMP recommends using the AAMP UL-TRAL TORQUE FASTENER ASSEMBLY LUBRICANT that is provided with each kit as opposed to motor oil. This is due to higher friction on the studs as well as consequences to the changing forces of the fasteners when motor oil or other low quality lubricants are used.

PRELOAD (TORQUE) RECOMMENDATIONS

6. Following the manufacturer's recommended torque sequence, tighten the caps and nuts in three equal steps to the specifications listed below with AAMP UL-TRAL TORQUE FASTENER ASSEMBLY LUBRICANT.

Inner studs – 8.775 long .50 8 lbs

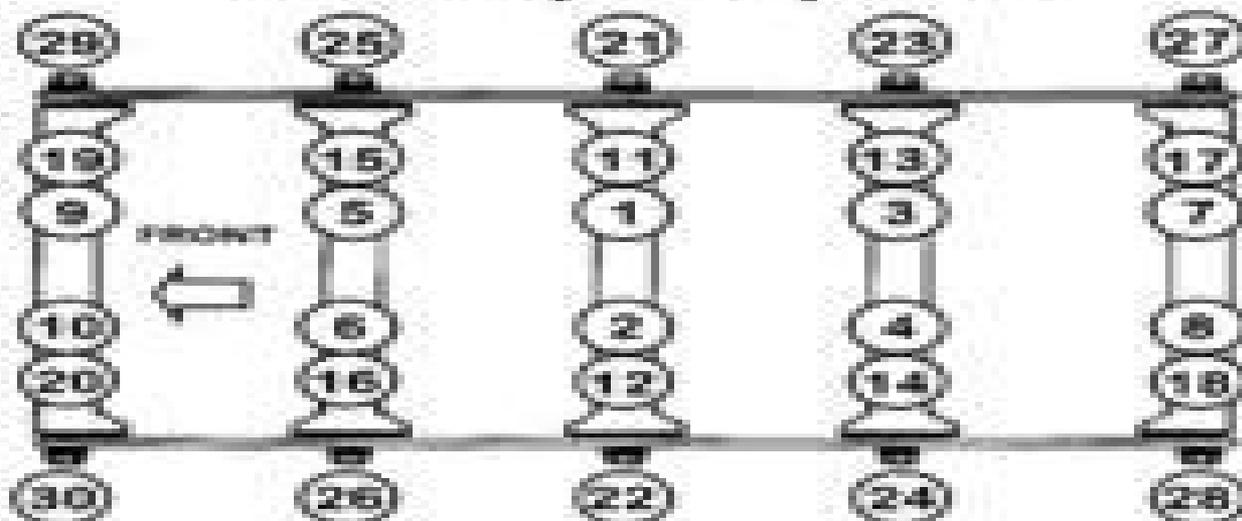

MS outer bolts .20 8 lbs use 17% overtorque the head of bolt

Outer studs – 8.550 long .50 8 lbs

Washer long nuts .20 8 lbs

FOOTNOTE: When changing from factory fasteners to high strength fasteners, changing force and direction will change. Therefore it will be necessary to check the main bearing cover for proper size and fit of main fasteners after installation of the studs and align cover the system back if necessary. The main frame should always be align front integral case fasteners and tighten which will be checked during their engine assembly at the recommended level.
