Targeting Cell Survival Pathways to Enhance Response to Chemotherapy ,2018-03-28 Targeting Cell Survival Pathways to Enhance Response to Chemotherapy encompasses recently developed molecular targeting agents and approaches that suppress cell survival signaling Cell survival signaling attenuates the effectiveness of conventional chemotherapy and numerous mechanisms have been described and continue to be described which contribute to cell survival in the face of chemotherapy treatment Key pathways leading to chemoresistance emanate from growth factor receptors PI3K STAT3 anti apoptotic Bcl 2 family members autophagy and the DNA damage response pathway New advances have underscored the potential of targeting each of these cell survival mechanisms to improve responsiveness to chemotherapy This book reviews these recent advances and provides a foundational background and hints of new opportunities for basic translational and clinical investigators focused on improving therapeutic responses to chemotherapy Presents cutting edge agents and approaches with proved success in different model systems that can be translated to a different type of cancer Brings updated information to be used to propose new clinical trials investigating innovative strategies for improving responses to chemotherapy Provides mechanistic details to help guide the design of laboratory studies associated with clinical trials

### **Community Series in Novel Biomarkers for Predicting Response to Cancer Immunotherapy, volume II**

,2024-01-10 This Research Topic is the second volume of the Community Series in Novel Biomarkers for Predicting Response to Cancer Immunotherapy Please see Volume I here Immunotherapy has revolutionized the treatment of malignancies Targeting of immune checkpoints cytotoxic T lymphocyte associated protein 4 programmed cell death protein 1 PD 1 and its ligand PD L1 has led to improving survival in a subset of patients Despite their remarkable success clinical benefit remains limited to only a subset of patients A significant limitation behind these current treatment modalities is an irregularity in clinical response which is especially pronounced among checkpoint inhibition Currently relevant predictors of cancer immunotherapy response include microsatellite instability high deficient mismatch repair MSI H dMMR expression of PD L1 tumor mutation burden TMB immune genomic characteristics and tumor infiltrating lymphocytes TILs However none of them have sufficient evidence to be a stratification factor Moreover as the combined strategies for effective cancer immunotherapy had been developed in multiple tumors such as Immunotherapy combined with chemotherapy radiotherapy targeted therapy and anti angiogenesis therapy Therefore the development of novel biomarkers endowed with high sensitivity specificity and accuracy able to identify which patients may truly benefit from the treatment with cancer immunotherapy would allow to refine the therapeutic selection and to better tailor the treatment strategy This research topic aims to focus on the advances in the discoveries of novel biomarkers for predicting response to cancer immunotherapy in various tumors We welcome the submission of original research and review articles that include biomarkers in clinical study and applications as well as technologies or discoveries in experimental approaches
