Digital Photogrammetry Wilfried Linder,2013-06-29 Photogrammetry is a science based technology with more than a century of history and development During this time the techniques used to get information about objects represented in photos have changed dramatically from pure optic mechanical equipment to a fully digital workflow in our days Parallel to this the handling became easier and so its possible also for non photogrammetrists to use these methods today This book is especially written for potential users which have no photogram metric education but would like to use the powerful capabilities from time to time or in smaller projects Geographers Geologists Cartographers Forest Engineers who would like to come into the fascinating field of photogrammetry via learning by doing For this reason this book is not a textbook for more and deeper the ory there exists a lot of literature and it is suggested to use some of this A special recommendation should be given to the newest book from KONECNY 2002 for basic theory and the mathematical backgrounds or to the book from SCHENK 1999 for the particular situation in digital photogrammetry For a quick reference especially to algorithms and technical terms see also the Photogrammetric Guide from ALBERTZ KREILING 1989 This book includes a CD ROM which contains all you need from software and data to learn about the various methods from the beginning scanning of the photos to final products like ortho

If you want to measure the size of an object let s say the length width and height of a house then normally you will carry this out directly at the object Now imagine that the house didn t exist anymore it was destroyed but some historic photos exist Then if you can determine the scale of the photos it must be pos ble to get the desired data Of course you can use photos to get information about objects This kind of formation is different So for example you may receive qualitative data the house seems to be old the walls are coloured light yellow from photo interpre tion or quantitative data like mentioned before the house has a base size of 8 by 6 meters from photo measurement or information in addition to your background knowledge the house has elements of the art nouveau style so may be c th structured at the beginning of the 20 century and so on
