as the language in which reality would be described and comprehended He explores from the agonistic paradigm the role of calculus quaternions Riemannian manifolds non Euclidean geometry analysis mathematical logic and more Extensive close readings of mathematical poems show how they critique the ways in which mathematical tools reduce phenomena and abstract the world of experience These readings bring out the formal performative and reflexive ways in which such poems act as defences of poetry s ability to achieve fidelity to experience and a richer picture of reality Rather than posing poetry as a passive receptacle of mathematical ideas the agon allows for an intense contestation of poetic and mathematical modes and their claims to truth through careful attention to the playfulness and subversiveness animating cross disciplinary interaction
