

## Carbon and its compounds

- Carbon is an element
- It is a non-metal
- The amount of carbon present in the earth's crust and atmosphere is very small
- All the living things, plants and animals are made up of carbon based compounds which are called organic compounds

### Carbon always forms covalent bonds

- It is not possible to remove 4 electrons from a carbon atom. It is also not possible to add as many as 4 electrons to a carbon atom.
- \* Since carbon atoms can achieve the inert gas electron arrangement only by the sharing of electrons, therefore, carbon always forms covalent bonds.

### Carbon is Tetravalent

One carbon atom requires 4 electrons to achieve the eight-electron inert gas structure, therefore the valency of carbon is 4.

### Self Combination.

The property of self combination of carbon atoms to form long chains is useful to us because it gives rise to an extremely large number of carbon compounds
