The Signal and the Noise

Nate Silver, 2012-09-27 The International Bestseller by The Galileo of number crunchers Independent Every time we choose a route to work decide whether to go on a second date or set aside money for a rainy day we are making a prediction about the future Yet from the financial crisis to ecological disasters we routinely fail to foresee hugely significant events often at great cost to society The rise of big data has the potential to help us predict the future yet much of it is misleading useless or distracting In *The Signal and the Noise* the New York Times political forecaster Nate Silver who accurately predicted the results of every state in the 2012 US election reveals how we can all develop better foresight in an uncertain world From the stock market to the poker table from earthquakes to the economy he takes us on an enthralling insider's tour of the high stakes world of forecasting showing how we can all learn to detect the true signals amid a noise of data Remarkable and rewarding Matthew D Ancona Sunday Telegraph A lucid explanation of how to think probabilistically Guardian *Digital new deal: the quest for a natural law in a digital society* Riccardo Genghini, 2021-06-08 The quest for a natural law that can be applied to a digital society may sound like an oxymoron but it is a necessary quest if we hope to institute a Digital New Deal Hence the title of this book Today once again mass media is disrupting society much as radio and cinema were used to buttress totalitarianism in the 1920s or even worse in the 15th century when the printing of the Bible unleashed 100 years of war plague and instability Things get messy when people disagree on facts rather than ideas Natural law springs from the features of the physical world which contains boundaries an inside and an outside limited resources living individuals objects living animals living plants climate the four elements etc None of this is a given in the digital world which looks today like feudalism in a box with fire walled communities run by unelected autocrats system administrators ruling over countless subjects whose identities are tied to the domain of the fire walled community and whose rights can only be enforced by the autocratic system administrator This dystopic reality is neither necessary nor inevitable It is the consequence of bad technical design and inappropriate business models which are destroying the spirit of free pluralism that enabled them to thrive in the first place Information technology has its own ontology and natural rules and we must understand them and learn to regard them as being among the founding legal principles of our free open pluralistic societies Of the 12 founding digital principles addressed here the most important may well be that we must each own and control our digital identities In the world created by information technology everyone and everything should possess a UID a unique identifier Without one we are just helpless particles lost in a dark and hostile universe
