In textbooks and courses in statistics substantive and measurement issues are rarely if at all considered. Similarly textbooks and courses in measurement virtually ignore design and analytic questions and research design textbooks and courses pay little attention to analytic and measurement issues. This fragmentary approach fosters a lack of appreciation of the interrelations and interdependencies among the various aspects of the research endeavor. Pedhazur and Schmelkin's goal is to help readers become proficient in these aspects of research and their interrelationships and to use that information in a more integrated manner. The authors offer extensive commentaries on inputs and outputs of computer programs in the context of the topics presented. Both the organization of the book and the style of presentation allow for much flexibility in choice sequence and degree of sophistication with which topics are dealt.
