Introduction To The Bootstrap And Robust Statistics:

Recent Advances in Robust Statistics: Theory and Applications Claudio Agostinelli, Ayanendranath Basu, Peter Filzmoser, Diganta Mukherjee, 2016-11-10 This book offers a collection of recent contributions and emerging ideas in the areas of robust statistics presented at the International Conference on Robust Statistics 2015 ICORS 2015 held in Kolkata during 12-16 January 2015. The book explores the applicability of robust methods in other non-traditional areas which includes the use of new techniques such as skew and mixture of skew distributions, scaled Bregman divergences and multilevel functional data methods. Application areas being circular data models and prediction of mortality and life expectancy. The contributions are of both theoretical as well as applied in nature. Robust statistics is a relatively young branch of statistical sciences that is rapidly emerging as the bedrock of statistical analysis in the 21st century due to its flexible nature and wide scope. Robust statistics supports the application of parametric and other inference techniques over a broader domain than the strictly interpreted model scenarios employed in classical statistical methods. The aim of the ICORS conference which is being organized annually since 2001 is to bring together researchers interested in robust statistics, data analysis and related areas. The conference is meant for theoretical and applied statisticians, data analysts from other fields, leading experts, junior researchers and graduate students. The ICORS meetings offer a forum for discussing recent advances and emerging ideas in statistics with a focus on robustness and encourage informal contacts and discussions among all the participants. They also play an important role in maintaining a cohesive group of international researchers interested in robust statistics and related topics whose interactions transcend the meetings and endure year-round.

Robust Statistics, Data Analysis, and Computer Intensive Methods Helmut Rieder, 2012-12-06 To celebrate Peter Huber's 60th birthday in 1994, our university had invited for a festive occasion in the afternoon of Thursday June 9. The invitation to honour this outstanding personality was followed by about fifty colleagues and former students from mainly all over the world. Others who could not attend sent their congratulations by mail and e-mail. P. Bickel: It's hard to imagine that Peter turned 60. After a welcome address by Adalbert Kerber, dean, the following lectures were delivered: Volker Strassen: Konstanz Almost Sure Primes and Cryptography; an Introduction; Frank Hampel: Zurich On the Philosophical Foundations of Statistics 1; Andreas Buja: Murray Hill Projections and Sections; High Dimensional Graphics for Data Analysis. The distinguished speakers lauded Peter Huber a hard and fair mathematician, a cooperative and stimulating colleague and an inspiring and helpful teacher. The Festkolloquium was surrounded with a musical program by the University's Brass Ensemble. The subsequent Workshop Robust Statistics, Data Analysis and Computer Intensive Methods in Schloss Thurnau, Friday until Sunday June 9-12, was organized about the areas in statistics that Peter Huber himself has markedly shaped. In the time since the conference most of the contributions could be edited for this volume, a late birthday present that may give a new impetus to further research in these fields.

Introduction to Robust Estimation and Hypothesis Testing Rand R. Wilcox, 2012-01-12 This book focuses on the practical aspects of modern and robust statistical methods The increased accuracy and power of modern methods versus conventional approaches to the analysis of variance ANOVA and regression is remarkable Through a combination of theoretical developments improved and more flexible statistical methods and the power of the computer it is now possible to address problems with standard methods that seemed insurmountable only a few years ago

Handbook of Income Inequality Measurement Jacques Silber, 2012-12-06 Amartya Sen Equality I spoke the word As if a wedding vow Ah but I was so much older then I am younger than that now Thus sang Bob Dylan in 1964 Approbation of equality varies not only with our age though it is not absolutely clear in which direction the values may shift over one's life time but also with the spirit of the times The 1960s were good years for singing in praise of equality The spirit of the present times would probably be better reflected by melodies in admiration of the Federal Reserve System And yet the technical literature on the evaluation and measurement of economic inequality has grown remarkably over the last three decades Even as actual economic policies especially in North America and Europe have tended to move towards focusing on virtues other than the avoidance of economic inequality the professional literature on assessing and gauging economic inequality has taken quite a jump forward A great many different problems have been addressed and effectively sorted out and new problems continue to be posed and analyzed The Contents A Review Jacques Silber has done a great service to the subject by producing this collection of admirably helpful and illuminating papers on different aspects of the measurement of income inequality The reach of this collection is quite remarkable Along with a thorough overview from the editor himself the major areas in this complex field have been carefully examined and accessibly discussed
