Patients with zoonotic infections can experience severe and life-threatening illness, whilst others remain asymptomatic. For example, animals can harbor germs asymptotically for long periods with no apparent impact on their own health. However, some microbes carried by animals can result in human illness depending on the zoonotic disease. Furthermore, it is widely reported that almost 60% of human diseases are zoonotic and at least 75% of the pathogens that cause diseases in humans are of zoonotic origin.
