**Reference Architectures for Critical Domains** Elisa Yumi Nakagawa,Pablo Oliveira Antonino,2023-03-14 This book presents reference architecture as a key blueprint to develop and evolve critical software intensive systems emphasizing both the state of the art in research and successful industrial cases After outlining the theoretical foundations of reference architecture and presenting an overview of a number of reference architectures proposed over the recent years this book dives into a set of critical application domains including defense health automotive avionics and Industry 4 0 highlighting the respective most relevant reference architectures that have impacted these domains the experience and lessons learned insights gained benefits and drawbacks and factors that make these architectures sustainable The book finishes with the most relevant directions for future advances in reference architectures The content of this book is useful for researchers and advanced professionals in industry in the areas of computing and engineering as well as in critical application domains that increasingly require interconnected large and complex software intensive systems

*Algorithm & SoC Design for Automotive Vision Systems* Jaeseok Kim,Hyunchul Shin,2014-06-29 An emerging trend in the automobile industry is its convergence with information technology IT Indeed it has been estimated that almost 90% of new automobile technologies involve IT in some form Smart driving technologies that improve safety as well as green fuel technologies are quite representative of the convergence between IT and automobiles The smart driving technologies include three key elements sensing of driving environments detection of objects and potential hazards and the generation of driving control signals including warning signals Although radar based systems are primarily used for sensing the driving environments the camera has gained importance in advanced driver assistance systems ADAS This book covers system on a chip SoC designs including both algorithms and hardware related with image sensing and object detection by using the camera for smart driving systems It introduces a variety of algorithms such as lens correction super resolution image enhancement and object detections from the images captured by low cost vehicle camera This is followed by implementation issues such as SoC architecture hardware accelerator software development environment and reliability techniques for automobile vision systems This book is aimed for the new and practicing engineers in automotive and chip design industries to provide some overall guidelines for the development of automotive vision systems It will also help graduate students understand and get started for the research work in this field

**Embedded Systems in Automotive Applications** Aboubakr El Hammoumi,Saad Motahhir,2026-03-09 With its well thought out overview of the topic Embedded Systems in Automotive Applications serves diverse audience across both in academia and industry The volume discusses the AUTOSAR architecture and standards highlighting their role in enabling the integration of emerging technologies such as blockchain based security within the Internet of Vehicles It further addresses embedded software design implementation and validation techniques that are fundamental to developing reliable and safety critical automotive systems In addition it examines electric vehicle

technologies with particular focus on advanced battery management strategies and real time power and health monitoring Autonomous driving is explored through LiDAR SLAM techniques and FPGA based hardware architectures designed to support robust vehicle navigation The book also emphasizes vehicle connectivity and telematics applications encompassing innovations in smart mobility and intelligent transport Together these themes provide readers with a rigorous and well rounded understanding of the challenges methodologies and opportunities shaping next generation automotive embedded systems Systematically discusses automotive embedded systems including information on the current state of the art and upcoming prospects Features in depth coverage of core topics such as AUTOSAR standards blockchain enabled IoV security embedded software validation battery management real time monitoring in electric vehicles LiDAR SLAM techniques and FPGA based architectures for autonomous navigation Ensures readers are up to date with cutting edge industry developments and are prepared to further steer research into prominent trends e g autonomous driving electric vehicles and connected cars among others

*Towards a Common Software/Hardware Methodology for Future Advanced Driver Assistance Systems* Guillermo Payá-Vayá,Holger Blume,2022-09-01 The European research project DESERVE DEvelopment platform for Safe and Efficient dRiVE 2012 2015 had the aim of designing and developing a platform tool to cope with the continuously increasing complexity and the simultaneous need to reduce cost for future embedded Advanced Driver Assistance Systems ADAS For this purpose the DESERVE platform profits from cross domain software reuse standardization of automotive software component interfaces and easy but safety compliant integration of heterogeneous modules This enables the development of a new generation of ADAS applications which challengingly combine different functions sensors actuators hardware platforms and Human Machine Interfaces HMI This book presents the different results of the DESERVE project concerning the ADAS development platform test case functions and validation and evaluation of different approaches The reader is invited to substantiate the content of this book with the deliverables published during the DESERVE project Technical topics discussed in this book include Modern ADAS development platforms Design space exploration Driving modelling Video based and Radar based ADAS functions HMI for ADAS Vehicle hardware in the loop validation systems

**Composition of Embedded Systems. Scientific and Industrial Issues** Fabrice Kordon,Oleg Sokolsky,2007-12-06 This book constitutes the thoroughly refereed post proceedings of the 13th International Monterey Workshop on Composition of Embedded Systems Scientific and Industrial Issues held in Paris France in October 2006 The 12 revised full papers presented were carefully selected during two rounds of reviewing and improvement from numerous submissions The workshop discussed a range of challenges in embedded systems design that require further major advances in technology

Springer Handbook of Automation Shimon Y. Nof,2023-06-16 This handbook incorporates new developments in automation It also presents a widespread and well structured conglomeration of new emerging application areas such as medical systems and health transportation security and maintenance service construction and retail as well as production or

logistics The handbook is not only an ideal resource for automation experts but also for people new to this expanding field

New Trends and Developments in Automotive System Engineering Marcello Chiaberge,2011-01-08 In the last few years the automobile design process is required to become more responsible and responsibly related to environmental needs Basing the automotive design not only on the appearance the visual appearance of the vehicle needs to be thought together and deeply integrated with the power developed by the engine The purpose of this book is to try to present the new technologies development scenario and not to give any indication about the direction that should be given to the research in this complex and multi disciplinary challenging field

**Engine Modeling and Control** Rolf Isermann,2014-07-01 The increasing demands for internal combustion engines with regard to fuel consumption emissions and driveability lead to more actuators sensors and complex control functions A systematic implementation of the electronic control systems requires mathematical models from basic design through simulation to calibration The book treats physically based as well as models based experimentally on test benches for gasoline spark ignition and diesel compression ignition engines and uses them for the design of the different control functions The main topics are Development steps for engine control Stationary and dynamic experimental modeling Physical models of intake combustion mechanical system turbocharger exhaust cooling lubrication drive train Engine control structures hardware software actuators sensors fuel supply injection system camshaft Engine control methods static and dynamic feedforward and feedback control calibration and optimization HiL RCP control software development Control of gasoline engines control of air fuel ignition knock idle coolant adaptive control functions Control of diesel engines combustion models air flow and exhaust recirculation control combustion pressure based control HCCI optimization of feedforward and feedback control smoke limitation and emission control This book is an introduction to electronic engine management with many practical examples measurements and research results It is aimed at advanced students of electrical mechanical mechatronic and control engineering and at practicing engineers in the field of combustion engine and automotive engineering

**Research and the Future of Telematics** Jerzy Mikulski,2020-10-13 This book constitutes selected papers from the 20th International Conference on Transport Systems Telematics TST 2020 held in Krak w Poland in October 2020 The 34 full papers presented in this volume were carefully reviewed and selected from 97 submissions They were organized in topical sections named telematics in road transport general view telematics in road transport details in applications telematics in rail and marine transport general about telematics
