Properties of Matter

Properties of Matter

QUESTIONS

Are you able to measure, how these quantities are related?

- Why, according to you, are all objects grouped together?
- Why are homogeneous and heterogeneous material grouped?

What Are Physical Properties?

Start with the table in the chapter below to start to understand physical properties of your common properties.

A physical property is a characteristic that can be observed without changing the identity of the substance. Mass and the properties of an object can change in colour, the shape, size or weight. However, the properties of an object are determined by the properties of the particles the object consists of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small something is, it has the same physical property or always the same

LEARNING OBJECTIVE
