approaches to statistical analysis while retaining the approachable and non mathematical style of the first edition. The book now includes full coverage of the most commonly used regression models: multiple linear regression, logistic regression, Poisson regression and Cox regression, as well as a chapter on general issues in regression modelling. In addition, new chapters introduce more advanced topics such as meta-analysis, likelihood bootstrapping and robust standard errors, and analysis of clustered data. Aimed at students of medical statistics, medical researchers, public health practitioners and practising clinicians using statistics in their daily work, the book is designed as both a teaching and a reference text. The format of the book is clear, with highlighted formulae and worked examples so that all concepts are presented in a simple, practical and easy to understand way. **Statistical Methods in Medical Research** Peter Armitage, Geoffrey Berry, J. N. S. Matthews, 2008-04-15. The explanation and implementation of statistical methods for the medical researcher or statistician remains an integral part of modern medical research. This book explains the use of experimental and analytical biostatistics systems. Its accessible style allows it to be used by the non-mathematician as a fundamental component of successful research. Since the third edition there have been many developments in statistical techniques. The fourth edition provides the medical statistician with an accessible guide to these techniques and to reflect the extent of their usage in medical research. The new edition takes a much more comprehensive approach to its subject. There has been a radical reorganization of the text to improve the continuity and cohesion of the

presentation and to extend the scope by covering many new ideas now being introduced into the analysis of medical research data The authors have tried to maintain the modest level of mathematical exposition that characterized the earlier editions essentially confining the mathematics to the statement of algebraic formulae rather than pursuing mathematical proofs Received the Highly Commended Certificate in the Public Health Category of the 2002 BMA Books Competition
