The Great Climate Change Debate, Karoly vs Happer Andy May,2022-09-04 February 15 2016 was the beginning of a debate on man made climate change between two well known experts in the field Dr William Happer and Dr David Karoly hosted by James Barham and his team at TheBestSchools org Both have been heavily involved in atmospheric research since the 1980s Happer believes that burning fossil fuels will have a minimal effect on climate but a large benefit to plant life and humanity Karoly believes the opposite How certain is the conclusion by some scientists that burning fossil fuels will lead to a climate disaster Only debates can ferret out their certainty or lack of it Burning fossil fuels may cause some harm but if we stop burning them we will face certain harm Which is worse Debates educate the public they are necessary This is an in depth look at both sides of the debate between two prominent experts

Advances in Carbon Management Technologies Subhas K. Sikdar, Frank Princiotta, 2021-01-31 Volume 2 of Advances in Carbon Management Technologies has 21 chapters It presents the introductory chapter again for framing the challenges that confront the proposed solutions discussed in this volume Section 4 presents various ways biomass and biomass wastes can be manipulated to provide a low carbon footprint of the generation of power heat and co products and of recovery and reuse of biomass wastes for beneficial purposes Section 5 provides potential carbon management solutions in urban and manufacturing environments This section also provides state of the art of battery technologies for the transportation sector The chapters in section 6 deals with electricity and the grid and how decarbonization can be practiced in the electricity sector The overall topic of advances in carbon management is too broad to be covered in a book of this size It was not intended to cover every possible aspect that is relevant to the topic Attempts were made however to highlight the most important issues of decarbonization from technological viewpoints Over the years carbon intensity of products and processes has decreased but the proportion of energy derived from fossil fuels has been stubbornly stuck at about 80% This has occurred despite very rapid development of renewable fuels because at the same time the use of fossil fuels has also increased Thus the challenges are truly daunting It is hoped that the technology choices provided here will show the myriad ways that solutions will evolve While policy decisions are the driving forces for technology development the book was not designed to cover policy solutions
