Fundamentals of Experimental Design

What is measured during a controlled experiment?

Why?

Working in the science lab can be a lot of fun. Mixing random chemicals and burning stuff just to see what happens can be entertaining (and possibly dangerous), but it doesn't lead to anything helpful to the scientific community. In order to be helpful to the community, a researcher's work in the lab must be systematic. A researcher usually asks a question and then designs an experiment to investigate that question. In this activity you will identify different types of variables that will help you design controlled experiments.

Model 1 - Alka-Seltzer® and Vinegar

- Briefly describe the reaction illustrated in Model 1 in one or more complete sentences.
An Alka-Seltzer was dropped into 100.0 mL vinegar (23.5°C). The temperature changed, resulting in a 22.6°C 100.0 mL solution.
- Did the room pressure change as the reaction occurred? If yes, was there an increase or decrease?
No, there was no change in room pressure.
- What two pieces of evidence observed during the "mix" phase of the reaction suggest that a chemical change is taking place?
There was bubbling & the temperature was changing.
- Did the solution temperature increase or decrease during the reaction?
The solution temperature decreased by .9°C.

Experimental Design. (English Edition) Khalid Khamis Alghamdi,2019-10-04 The aim of the experimental design is to answer specific questions in order to determine which questions a particular experiment can answer we need to know what was tested and what was measured during the experiment We hold all other variables constant and change only what we want to test and measure I will leave all the experiences without an answer because I haven t tried them It is just ideas and training for you dear reader on scientific thinking and the results should not be specific and known in advance but it is scientific honesty to be as it happened and not as we want A First Course in Design and Analysis of Experiments Gary W. Oehlert,2000 **Methods for Experimental Design** J.L. Goupy,1993-05-05 A method for organizing and conducting

scientific experiments is described in this volume which enables experimenters to reduce the number of trials run while retaining all the parameters that may influence the result The choice of ideal experiments is based on mathematical concepts but the author adopts a practical approach and uses theory only when necessary Written for experimenters by an experimenter it is an introduction to the philosophy of scientific investigation Researchers with limited time and resources at their disposal will find this text a valuable guide for solving specific problems efficiently The presentation makes extensive use of examples and the approach and methods are graphical rather than numerical All calculations can be performed on a personal computer readers are assumed to have no previous knowledge of the subject The presentation is such that the beginner may acquire a thorough understanding of the basic concepts However there is also sufficient material to challenge the advanced student The book is therefore suitable for both first and advanced courses The many examples can also be used in detail for self study or as a reference
