Small Area Estimation in Survey Sampling Parimal Mukhopadhyay, 1998 This book gives a systematic exposition of the problems and procedures in producing statistics for small areas districts subdivisions municipal areas batches of industrial products which have been lying scattered over different journals over the last three decades The motivations of the different procedures have been explained the promising results have been emphasized and the new research areas are indicated The manner of exposition has been tried to be made lucid The book will generate further interest in the area and would be helpful to the researchers and the survey statisticians working in this

field **Subnational Population Estimates** David A. Swanson, Jeff Tayman, 2012-05-23 Providing a unified and comprehensive treatment of the theory and techniques of sub national population estimation this much needed publication does more than collate disparate source material It examines hitherto unexplored methodological links between differing types of estimation from both the demographic and sample survey traditions and is a self contained primer that combines academic rigor with a wealth of real world examples that are useful models for demographers Between censuses which are expensive administratively complex and thus infrequent demographers and government officials must estimate population using either demographic modeling techniques or statistical surveys that sample a fraction of residents These estimates play a central role in vital decisions that range from funding allocations and rate setting to education health and housing provision They also provide important data to companies undertaking market research However mastering small area and sub national population estimation is complicated by scattered incomplete and outdated academic sources an issue this volume tackles head on Rapidly increasing population mobility is making inter census estimation ever more important to strategic planners This book will make the theory and techniques involved more accessible to anyone with an interest in developing or using population estimates

Measuring the Group Quarters Population in the American Community Survey National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Statistical Methods for Measuring the Group Quarters Population in the American Community Survey, 2011-01-29 Following several years of testing and evaluation the American Community Survey ACS was launched in 2005 as a replacement for the census long form used to collect detailed social economic and housing data from a sample of the U S population as part of the decennial census During the first year of the ACS implementation the Census Bureau collected data only from households In 2006 a sample of group quarters GQs such as correctional facilities nursing homes and college dorms was added to more closely mirror the design of the census long form sample The design of the ACS relies on monthly samples that are cumulated to produce multiyear estimates based on 1 3 and 5 years of data The data published by the Census Bureau for a geographic area depend on the area s size The multiyear averaging approach enables the Census Bureau to produce estimates that are intended to be robust enough to release for small areas such as the smallest governmental units and census block groups However the sparseness of the GQ representation in the monthly samples affects the quality of the estimates in many small areas that have large GQ populations relative to the total population The Census Bureau asked the National Research Council to review and evaluate the statistical methods used for measuring the GQ population This book presents recommendations addressing improvements in the sample design sample allocation weighting and estimation procedures to assist the Census Bureau s work in the very near term while further research is conducted to address the underlying question of the relative importance and costs of the GQ data collection in the context of the overall ACS design

Statistical Uses of Administrative Records Beth Kilss, Wendy Alvey, 1984 **Small Area Estimation with Simulated Samples from the**

Population Census, November 2009 ,2011 Small area estimation involves producing estimates for small geographical regions for which direct survey estimates are statistically unreliable This is achieved by constructing a model involving auxiliary variables as well as survey data and using it to predict for all units not surveyed Analytical Services Branch has been researching and applying small area estimation SAE techniques since 2003 including recently evaluating small area estimates SAEs of labour force status at the local government area LGA level The primary quality measures for SAEs are their estimated relative root mean squared errors RRMSEs This paper describes an investigation into the quality of the SAEs and estimated RRMSEs This investigation concluded that the small area estimates of labour force status are generally of reasonable quality Exceptions occur for local government areas with low average sample sizes due to being in remote parts of Australia or having small populations The major cause of bias in the estimates is the difference between the parameter estimates in models fitted to the whole population and those in models fitted to samples with bias due to the model choice being the secondary cause RRMSE estimates are generally conservative but can greatly underestimate the mean squared error for some local government areas with small average sample sizes

GIS and the Social Sciences Dimitris Ballas,Graham Clarke,Rachel S. Franklin,Andy Newing,2017-09-18 GIS and the Social Sciences offers a uniquely social science approach on the theory and application of GIS with a range of modern examples It explores how human geography can engage with a variety of important policy issues through linking together GIS and spatial analysis and demonstrates the importance of applied GIS and spatial analysis for solving real world problems in both the public and private sector The book introduces basic theoretical material from a social science perspective and discusses how data are handled in GIS what the standard commands within GIS packages are and what they can offer in terms of spatial analysis It covers the range of applications for which GIS has been primarily used in the social sciences offering a global perspective of examples at a range of spatial scales The book explores the use of GIS in crime health education retail location urban planning transport geodemographics emergency planning and poverty income inequalities It is supplemented with practical activities and datasets that are linked to the content of each chapter and provided on an eResource page The examples are written using ArcMap to show how the user can access data and put the theory in the textbook to applied use using proprietary GIS software This book serves as a useful guide to a social science approach to GIS techniques and applications It provides a range of modern applications of GIS with associated practicals to work through and demonstrates how researcher and policy makers alike can use GIS to plan services more effectively It will prove to be of great interest to geographers as well as the broader social sciences such as sociology crime science health business and marketing

Uncertainty and Context in GIScience and Geography Yongwan Chun,Mei-Po Kwan,Daniel A. Griffith,2021-05-13 Uncertainty and context pose fundamental challenges in GIScience and geographic research Geospatial data are imbued with errors e g measurement and sampling and various types of uncertainty that often obfuscate any understanding of the effects

of contextual or environmental influences on human behaviors and experiences These errors or uncertainties include those attributable to geospatial data measurement model specifications delineations of geographic context in space and time and the use of different spatiotemporal scales and zonal schemes when analyzing the effects of environmental influences on human behaviors or experiences In addition emerging sources of geospatial big data including smartphone data data collected by GPS and various types of wearable sensors e g accelerometers and air pollutant monitors volunteered geographic information and or location based social media data i e crowd sourced geographic information inevitably contain errors and their quality cannot be fully controlled during their collection or production Uncertainty and Context in GIScience and Geography Challenges in the Era of Geospatial Big Data illustrates how cutting edge research explores recent advances in this area and will serve as a useful point of departure for GIScientists to conceive new approaches and solutions for addressing these challenges in future research The seven core chapters in this book highlight many challenges and opportunities in confronting various issues of uncertainty and context in GIScience and geography tackling different topics and approaches The chapters in this book were originally published as a special issue of the International Journal of Geographical Information Science
