Chapter: Chemical Equations and Reactions

Do the work carefully, using the letter of the letter of choice that best completes each statement or best answers each question.

1. The mass number of an atom is the sum of the number of protons and neutrons in the nucleus. Which of the following statements about isotopes is true? (1 point)

 - a. They have the same mass.
 - b. They have different numbers of electrons.
 - c. They have the same number of protons and neutrons.
 - d. They all have the same number of protons, but different numbers of neutrons.
2. An element is described by chemical equations involving n reactants and m products. Which of the following is true? (1 point)

 - a. n must be equal to m .
 - b. n must be less than m .
 - c. n must be greater than m .
 - d. n and m can be any value.
3. Which of the following statements is always true? (1 point)

 - a. The products of a reaction will have the same mass as the reactants.
 - b. All of the reactants will be used.
 - c. The products will have the same number of atoms as the reactants.
 - d. The number of molecules will be the same as the number of atoms.
4. There is a reaction between a gas and a solid. Which of the following is true? (1 point)

 - a. The products will be a gas and a solid.
 - b. The products will be a gas and a liquid.
 - c. The products will be a gas and a solid.
 - d. All of the above.
5. Which of the following is true? (1 point)

 - a. The products of a reaction will have the same mass as the reactants.

Handbook of Modern Pharmaceutical Analysis Satinder Ahuja, Stephen Scypinski, 2001. This book describes the role modern pharmaceutical analysis plays in the development of new drugs. Detailed information is provided as to how the quality of drug products is assured from the point of discovery until the patient uses the drug. Coverage includes state-of-the-art topics such as analytics for combinatorial chemistry and high-throughput screening, formulation development, stability studies, international regulatory aspects, and documentation and future technologies that are likely to impact the field. Emphasis is placed on current, easy-to-follow methods that readers can apply in their laboratories. No book has effectively replaced the very popular text *Pharmaceutical Analysis* that was edited in the 1960s by Tak Higuchi. This book will fill that gap with an up-to-date treatment that is both handy and authoritative.

Religion, Magic, and Science in Early Modern Europe and America Allison P. Coudert, 2011-10-17. This fascinating study looks at how the seemingly incompatible forces of science, magic, and religion came together in the 15th, 16th, and 17th centuries to form the foundations of modern culture. As *Religion, Magic, and Science in Early Modern Europe and America* makes clear, the early modern period was one of stark contrasts: witch burnings and the brilliant mathematical physics of Isaac Newton; John Locke's plea for tolerance and the palpable lack of it; the richness of intellectual and artistic life and the poverty of material existence for all but a tiny percentage of the population. Yet for all the poverty, insecurity, and superstition, the period produced a stunning galaxy of writers, artists, philosophers, and scientists. This book looks at the conditions that fomented the emergence of such outstanding talent, innovation, and invention in the period 1450 to 1800. It examines the interaction between religion, magic, and science during that time, the impossibility of clearly differentiating between the three, and the impact of these forces on the geniuses who laid the foundation for modern science and culture.
