Fundamentals of Modern Bioprocessing Sarfaraz K. Niazi, Justin L.

Brown, 2017-07-27 Biological drug and vaccine manufacturing has quickly become one of the highest value fields of bioprocess engineering and many bioprocess engineers are now finding job opportunities that have traditionally gone to chemical engineers. *Fundamentals of Modern Bioprocessing* addresses this growing demand. Written by experts well established in the field, this book connects the principles and applications of bioprocessing engineering to healthcare product manufacturing and expands on areas of opportunity for qualified bioprocess engineers and students. The book is divided into two sections: the first half centers on the engineering fundamentals of bioprocessing, while the second half serves as a handbook offering advice and practical applications. Focused on the fundamental principles at the core of this discipline, this work outlines every facet of design, component selection, and regulatory concerns. It discusses the purpose of bioprocessing to produce products suitable for human use, describes the manufacturing technologies related to bioprocessing, and explores the rapid expansion of bioprocess engineering applications relevant to health care product manufacturing. It also considers the future of bioprocessing, the use of disposable components, which is the fastest growing area in the field of bioprocessing to replace traditional stainless steel. In addition, this text discusses the many types of genetically modified organisms, outlines laboratory techniques, includes the most recent developments, serves as a reference, and contains an extensive bibliography. Emphasizes biological manufacturing using recombinant processing, which begins with creating a genetically modified organism using recombinant techniques. *Fundamentals of Modern Bioprocessing* outlines both the principles and applications of bioprocessing engineering related to healthcare product manufacturing. It lays out the basic concepts, definitions, methods, and applications of bioprocessing. A single volume, comprehensive reference developed to meet the needs of students with a bioprocessing background, it can also be used as a source for professionals in the field.

Bioprocess Engineering

Principles Pauline M. Doran, 2012-04-23 This welcome new edition discusses bioprocess engineering from the perspective of biology students. It includes a great deal of new material and has been extensively revised and expanded. These updates strengthen the book and maintain its position as the book of choice for senior undergraduates and graduates seeking to move from biochemistry, microbiology, molecular biology to bioprocess engineering. All chapters thoroughly revised for current developments with over 200 pgs of new material, including significant new content in Metabolic Engineering, Sustainable Bioprocessing, Membrane Filtration, Turbulence and Impeller Design, Downstream Processing, Oxygen Transfer Systems. Over 150 new problems and worked examples, more than 100 new illustrations. *Material And Energy Balances For Engineers And Environmentalists (Second Edition)* Colin William Oloman, 2023-06-20 Material and energy M E balances are fundamental to biological, chemical, electrochemical, photochemical, and environmental engineering disciplines and important in many fields related to sustainable development. This comprehensive compendium presents the basic M E balance concepts.

and calculations in a format easily digested by students engineering professionals and those concerned with related environmental issues The useful reference text includes worked examples for each chapter and demonstrates process balances in the framework of M E concerns of the 21st century The additional problems and solutions in the Appendix embrace a wide range of subjects from fossil fuels to fuel cells solar energy space stations carbon dioxide capture and sodium ion batteries

Microalgae as a Source of Bioenergy: Products, Processes and

Economics José Carlos Magalhães Pires,2017-09-27 Microalgae could play an important role in the achievement of sustainability goals related to the generation of renewable energy and greenhouse gas GHG emissions These photosynthetic microorganisms are able to capture CO₂ and therefore can be used to produce biofuels such as ethanol methane and green diesel Other factors such as their high growth rate ability to use wastewater as a culture medium and the ability to grow on non arable land makes them a potentially economical source of biofuel production on a large scale This monograph introduces the reader to the basic and applied science of microalgal biofuel production Chapters in the volume give information about bioethanol and biogas production from microalgal sources the fermentation process optimization of culture parameters and industrial applications of biomass projects The book is a useful reference for biotechnology and environmental science graduates and professionals interested in biofuel production **Vacuum Bubbling** Yong Du

Jun,2024-05-23 Vacuum Bubbling introduces the background and applications for generating bubbles under a vacuum condition accomplished through depressurization without the need to heat water It presents the advantage of utilizing vapor bubble in deaeration applications because the diffusion for degassing happens between the water body and micro vapor bubbles without the need of membrane or packing Instead of relying on massive heating vacuum bubbling focuses on depressurization down to the level of saturated vapor pressure or below to secure vapor bubbles with virtually zero dissolved non condensable gases including oxygen The book considers prospective applications such as extracting high oxygen content air from water for underwater breathing pretreatment of aircraft fuel before being pumped into a fuel tank system and probable desalination applications through massive bubbling combined with low grade renewable energy The book is intended for researchers in thermal fluids heat and mass transfer process engineering and water treatment fields and industry professionals working in power generation plant and process engineering transportation and energy **Australian**
