Creating Mental Illness Allan V. Horwitz, 2002-01-15 In this surprising book Allan V Horwitz argues that our current conceptions of mental illness as a disease fit only a small number of serious psychological conditions and that most conditions currently regarded as mental illness are cultural constructions normal reactions to stressful social circumstances or simply forms of deviant behavior Thought provoking and important Drawing on and consolidating the ideas of a range of authors Horwitz challenges the existing use of the term mental illness and the psychiatric ideas and practices on which this usage is based Horwitz enters this controversial territory with confidence conviction and clarity Joan Busfield American Journal of Sociology Horwitz properly identifies the financial incentives that urge therapists and drug companies to proliferate psychiatric diagnostic categories He correctly identifies the stranglehold that psychiatric diagnosis has on research funding in mental health Above all he provides a sorely needed counterpoint to the most strident advocates of disease model psychiatry Mark Sullivan Journal of the American Medical Association Horwitz makes at least two major contributions to our understanding of mental disorders First he eloquently draws on evidence from the biological and social sciences to create a balanced integrative approach to the study of mental disorders Second in accomplishing the first contribution he provides a fascinating history of the study and treatment of mental disorders from early asylum work to the rise of modern biological psychiatry Debra Umberson Quarterly Review of Biology

**Dynamic Psychology in Modernist British Fiction** G. Johnson, 2005-10-06 Dynamic Psychology in Modernist British Fiction argues that literary critics have tended to distort the impact of pre Freudian psychological discourses including psychical research on Modern British Fiction Psychoanalysis has received undue attention over a more typical British eclecticism embraced by now forgotten figures including Frederic Myers and William McDougall This project focuses on the Edwardian novelists most fully engaged by dynamic psychology May Sinclair and J D Beresford but also reconsiders Arnold Bennett and D H Lawrence The book concludes by demonstrating Woolf s subtle assimilation of pre Freudian discourse

**The Book of Psychiatric Books** Sidney Crown, Hugh Lionel Freeman, 1994 This volume consists of critical reviews of the most important works in psychiatry ever published and excerpts from those works For psychotherapy more than any other profession books define the field Most therapists have a personal list of books that for them have been memorable perhaps even mutative in influencing their thinking and clinical practice But in addition to such individual favorites choices are made at different times by the larger

society and by one's professional group. As a result a particular book comes to be regarded for some time as the book of the moment after which it either sinks into oblivion or passes into the respectability of acceptance as an essential part of any reference list. If it does survive for long though it will inevitably come to be seen rather differently over time. Starting in 1982 the editors Drs Sidney Crown and Hugh Freeman commissioned respected scholars to contribute commentary on seminal books in the field to a series in the British Journal of Psychiatry called Books Reconsidered. In most cases the contributors themselves had known the books over a long period so that their own personal development as professionals was intimately connected with the works themselves and how they have stood up to time and circumstance. This collection includes all Books Reconsidered pieces that were published between the inception of the series in 1982 and the opening months of 1992. The editors have tried to cover as many fields as possible that are relevant to psychiatry as a whole and to its subspecialties. Every mental health professional will find these critiques both interesting and stimulating.
