Black Holes Derek J. Raine, Edwin George Thomas, 2010 This introduction to the fascinating subject of black holes fills a significant gap in the literature which exists between popular non mathematical expositions and advanced textbooks at the research level It is designed for advanced undergraduates and first year postgraduates as a useful stepping stone to the advanced literature The book provides an accessible introduction to the exact solutions of Einstein's vacuum field equations describing spherical and axisymmetric rotating black holes The geometry and physical properties of these spacetimes are explored through the motion of particles and light The use of different coordinate systems maximal extensions and Penrose diagrams is explained The association of the surface area of a black hole with its entropy is discussed and it is shown that with the introduction of quantum mechanics black holes cease to be black and can radiate This result allows black holes to satisfy the laws of thermodynamics and thus be consistent with the rest of physics In this new edition the problems in each chapter have been revised and solutions are provided The text has been expanded to include new material on wormholes and clarify various other issues

Euclidean Quantum Gravity G. W. Gibbons, Stephen W. Hawking, 1993 The Euclidean approach to Quantum Gravity was initiated almost 15 years ago in an attempt to understand the difficulties raised by the spacetime singularities of classical general relativity which arise in the gravitational collapse of stars to form black holes and the entire universe in the Big Bang An important motivation was to develop an approach capable of dealing with the nonlinear non perturbative aspects of quantum gravity due to topologically non trivial spacetimes There are important links with a Riemannian geometry Since its inception the theory has been applied to a number of important physical problems including the thermodynamic properties of black holes quantum cosmology and the problem of the cosmological constant It is currently at the centre of a great deal of interest This is a collection of survey lectures and reprints of some important lectures on the Euclidean approach to quantum gravity in which one expresses the Feynman path integral as a sum over Riemannian metrics As well as papers on the basic formalism there are sections on Black Holes Quantum Cosmology Wormholes and Gravitational Instantons
