Advanced Multiresponse Process Optimisation Tatjana V. Šibalija,Vidosav D. Majstorović,2015-07-25 This book presents an intelligent integrated problem independent method for multiresponse process optimization In contrast to traditional approaches the idea of this method is to provide a unique model for the optimization of various processes without imposition of assumptions relating to the type of process the type and number of process parameters and responses or interdependences among them The presented method for experimental design of processes with multiple correlated responses is composed of three modules an expert system that selects the experimental plan based on the orthogonal arrays the factor effects approach which performs processing of experimental data based on Taguchi s quality loss function and multivariate statistical methods and process modeling and optimization based on artificial neural networks and metaheuristic optimization algorithms The implementation is demonstrated using four case studies relating to high tech industries and advanced non conventional processes
