Foundations Of Multithreaded Parallel And Distributed Programming :

Foundations of Multithreaded, Parallel, and Distributed Programming Gregory R. Andrews, 2000 Foundations of Multithreaded Parallel and Distributed Programming covers and then applies the core concepts and techniques needed for an introductory course in this subject Its emphasis is on the practice and application of parallel systems using real world examples throughout Greg Andrews teaches the fundamental concepts of multithreaded parallel and distributed computing and relates them to the implementation and performance processes He presents the appropriate breadth of topics and supports these discussions with an emphasis on performance Features Emphasizes how to solve problems with correctness the primary concern and performance an important but secondary concern Includes a number of case studies which cover such topics as pthreads MPI and OpenMP libraries as well as programming languages like Java Ada high performance Fortran Linda Occam and SR Provides examples using Java syntax and discusses how Java deals with monitors sockets and remote method invocation Covers current programming techniques such as semaphores locks barriers monitors message passing and remote invocation Concrete examples are executed with complete programs both shared and distributed Sample applications include scientific computing and distributed systems 0201357526B04062001 [Concurrent Programming in Java](#) Douglas Lea, 2000 Software Programming Languages [Parallel Metaheuristics](#) Enrique Alba, 2005-09-19 Solving complex optimization problems with parallel metaheuristics Parallel Metaheuristics brings together an international group of experts in parallelism and metaheuristics to provide a much needed synthesis of these two fields Readers discover how metaheuristic techniques can provide useful and practical solutions for a wide range of problems and application domains with an emphasis on the fields of telecommunications and bioinformatics This volume fills a long existing gap allowing researchers and practitioners to develop efficient metaheuristic algorithms to find solutions The book is divided into three parts Part One Introduction to Metaheuristics and Parallelism including an Introduction to Metaheuristic Techniques Measuring the Performance of Parallel Metaheuristics New Technologies in Parallelism and a head to head discussion on Metaheuristics and Parallelism Part Two Parallel Metaheuristic Models including Parallel Genetic Algorithms Parallel Genetic Programming Parallel Evolution Strategies Parallel Ant Colony Algorithms Parallel Estimation of Distribution Algorithms Parallel Scatter Search Parallel Variable Neighborhood Search Parallel Simulated Annealing Parallel Tabu Search Parallel GRASP Parallel Hybrid Metaheuristics Parallel Multi Objective Optimization and Parallel Heterogeneous Metaheuristics Part Three Theory and Applications including Theory of Parallel Genetic Algorithms Parallel Metaheuristics Applications Parallel Metaheuristics in Telecommunications and a final chapter on Bioinformatics and Parallel Metaheuristics Each self contained chapter begins with clear overviews and introductions that bring the reader up to speed describes basic techniques and ends with a reference list for further study Packed with numerous tables and figures to illustrate the complex theory and processes this comprehensive volume also includes numerous practical real world optimization problems and their solutions

This is essential reading for students and researchers in computer science mathematics and engineering who deal with parallelism metaheuristics and optimization in general

Nonsequential and Distributed Programming with Go Christian Maurer,2025-08-02 After a short chapter on basic aspects of software engineering and its realization in Go this book introduces to nonsequential and distributed programming with Go It systematically presents basic concepts for the synchronization and communication of concurrent processes These include locks semaphores fairness and deadlocks monitors local and network wide message passing networks as graphs network exploration distributed depth and breadth first search and the selection of a leader in networks In order to make readers familiar with the concepts the author always takes up the same classic examples This makes learning easier because the concepts presented can be compared more easily with the language resources The algorithms are formulated in the Go programming language which can be used to express numerous synchronization concepts Due to its simple syntax Go also offers the advantage that readers without prior knowledge can follow the basic concepts The chapters on locks semaphores monitors and network wide message passing also present some basic approaches to programming in C and Java All source texts are available online Besides a number of error corrections and smaller updates in this second edition the nanouniverse nU is replaced with the microuniverse U This allows for beautiful animations in many places which are not possible with the nanouniverse due to a lack of the necessary support for inputs and outputs e g in the chapters on fairness messages farMonitors traversals and election

Type Systems for Distributed Programs: Components and Sessions Ornela Dardha,2016-07-27 In this book we develop powerful techniques based on formal methods for the verification of correctness consistency and safety properties related to dynamic reconfiguration and communication in complex distributed systems In particular static analysis techniques based on types and type systems are an adequate methodology considering their success in guaranteeing not only basic safety properties but also more sophisticated ones like deadlock or lock freedom in concurrent settings The main contributions of this book are twofold i We design a type system for a concurrent object oriented calculus to statically ensure consistency of dynamic reconfigurations ii We define an encoding of the session pi calculus which models communication in distributed systems into the standard typed pi calculus We use this encoding to derive properties like type safety and progress in the session pi calculus by exploiting the corresponding properties in the standard typed pi calculus
