Public Risk Perception in Public Health Policies

Ibrahim A. Elshaer,Abdalwali Lutfi,Adi Mohammad Alsyouf,Mahmaod I. Alrawad,Kingston Rajiah,Aidi Ahmi,2025-10-14 Public risk perception is a critical factor in determining how policymakers and other decision makers respond to potential risks If the public perceives a particular activity or technology as being high risk policymakers may be more likely to regulate or ban it even if expert assessments suggest that the risks are relatively low This can have important economic and social implications as it may limit innovation and restrict people s choices Public risk perception can influence the adoption of new technologies and public health interventions For example if people perceive a new vaccine or medical treatment as being risky or unsafe they may be less likely to use it even if scientific evidence suggests that it is effective and safe This can undermine efforts to improve public health and prevent the spread of diseases In order to address these issues it is essential to understand how the public perceives different types of risks By identifying the factors that shape public risk perceptions and devising methods to evaluate public risk perception policymakers and other stakeholders can develop more effective risk communication strategies and risk management plans This may involve engaging with the public to address their concerns providing clear and transparent information about risks and benefits and building trust and confidence in new technologies and interventions Ultimately by taking into account the perspectives and concerns of the public decision makers can make more informed and responsible choices about managing risks and promoting public welfare
