Committee on Appropriations Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies,1995 IUTAM Symposium on Mechanics and Reliability of Actuating Materials W. Yang,2006-06-28 Actuating materials hold a promise for fast spreading applications in smart structures and active control systems and have attracted extensive attention from scientists of both mechanics and materials sciences communities High performance and stability of actuating materials and structures play a decisive role in their successive applications as sensors and actuators in structural control and robotics The advances of actuating materials however recently encountered a severe reliability issue For a better understanding toward this issue scientific efforts are of paramount significance to gain a deep insight into the intricate deformation and failure behaviors of actuating materials To examine the state of the art in this subject the general assembly of IUTAM approved in August 2002 at Cambridge University UK a proposal to hold an IUTAM symposium to summarize the relevant research findings The main themes of the symposium are i the constitutive relations of actuating materials that couple mechanical electrical thermal and magnetic properties as well as incorporate phase transformation and domain switch ii the physical mechanisms of deformation damage and fatigue crack growth of actuating materials iii the development of failure resilient approaches that base on the macro meso and micro mechanics analyses iv the investigation of microstructural evolution stability of phase transformation and size effects of ferroelectric ceramics shape memory alloys actuating polymers and bio actuating materials The above problems represent an exciting challenge and form a research thrust of both materials science and solid mechanics The IUTAM Symposium GA
