EPC CONTRACTS IN THE POWER SECTOR

Introduction

Engineering, procurement and construction (EPC) contracts are the predominant form of contract used in industrial construction made by the private sector in Singapore and complex infrastructure projects.¹ Unlike an EPC contract, construction is split in different components. Facility construction would only take place after the design, engineering and finishing. Since EPC contracts are commonly used in large construction projects, it is common to follow a completed facility, the contractor must deliver the facility for a specified time to a specified date and in great compliance to the specifications. Failure to comply with any requirements will usually result in the contractor incurring monetary penalties.

It is usually to consider EPC contracts suitable for low-risk construction projects given the fact that the contractor assumes responsibility of construction. In addition, all construction risks (contractual, force and, in a small amount, all) are transferred to the contractor under EPC contracts in certain conditions. The greatest risk being transferred is contractual engineering as the contractor usually is the contract administrator. The contractor usually operates the facility and is responsible for the facility's operation and the payment of maintenance of the facility throughout its term.

However, because of their flexibility, the value and the complexity of projects and facilities drive their EPC contracts and the growing popularity of EPC projects, the public sector EPC contracts will continue to be the predominant

form of construction contract used in large scale infrastructure projects in most jurisdictions.²

This paper will only focus on the use of EPC contracts in the power sector. It covers the benefits of the contract form and application of EPC contracts used in all projects. There is a growing power sector EPC contracts demand and would be expected to grow because of a number of factors:

Design of Hydroelectric Power Plants - Step by Step Geraldo Magela Pereira, 2021-09-20 The design of a hydroelectric plant along with an installation of transformation of potential energy of water into electricity is an activity that is not standardized Each new project is an interesting engineering challenge and teams need to work in different conditions of each site integrated to design a functional economical and environmentally sustainable project The development of a project here understood as the plant itself the reservoir the maneuver substation and the associated transmission line is a multidisciplinary activity that encompasses areas of civil engineering geology mechanical and electrical engineering environmental engineering economic engineering construction and assembly and the engineering of operation and maintenance of civil works and electromechanical equipment The book is organized to facilitate the performance of

professional life of the new generations of engineers who will join the Electric Sector or in other sectors that demand the knowledge regarding hydraulic structures The book is a simple manual providing the practical step by step procedure for designing hydroelectric plants including legislation with a general view of the project *Environmental and Energy Law* Karen Makuch,Ricardo Pereira,2012-10-01 Despite bringing prosperity industrialisation generally leads to increasing levels of pollution which has a detrimental impact on the environment In response legislation which seeks to control or prevent such impact has become common Similarly climate change and energy security have become major drivers for the regulatory regimes that have emerged in the energy field Given the global or regional scope of many environmental problems international cooperation is often necessary to ensure such legislation is effective The EU and the UK have contributed to the development of the environmental and energy law regimes currently in force spanning across international transnational and national levels At the same time practical responses to environmental and energy problems have largely been the focus of engineers scientists and other technical experts Environmental Energy Law attempts to bridge the knowledge gap between legal developments designed to achieve environmental and or energy related objectives and the practical scientific and technical considerations applicable to the same environmental problems In particular it attempts to convey a broad range of topical issues in environmental and energy law from climate and energy regulation technology innovation and transfer to pollution control environmental governance and enforcement In addition the book outlines key sector specific legal regimes including water waste and air quality management focusing on issues or topics that are particularly relevant to both environmental and energy lawyers and engineering science and technology oriented professionals and students In this vein the book guides the reader on some basic practical applications of the law within scientific engineering and other practical settings The book will be useful to all those working or studying in the environmental or energy arena including law students legal professionals engineering and science students and professionals By adopting a multi disciplinary approach to environmental and energy law the book embraces all readerships and helps to address the often thorny problem of communication between scientists engineers lawyers and policy makers **Competition Law and Economic Regulation**

in Southern Africa Imraan Valodia,Jonathan Klaaren,Simon Roberts,2017-07-04 Shaping markets through competition and economic regulation is at the heart of addressing the development challenges facing countries in southern Africa The contributors to Competition Law and Economic Regulation Addressing Market Power in southern Africa critically assess the efficacy of the competition and economic regulation frameworks including the impact of a number of the regional competition authorities in a range of sectors throughout southern Africa Featuring academics as well as practitioners in the field the book addresses issues common to southern African countries where markets are small and concentrated with particularly high barriers to entry and where the resources to enforce legislation against anti competitive conduct are limited What is needed the contributors argue is an understanding of competition and regional integration as part of an inclusive growth agenda for

Africa By examining competition and regulation in a single framework and viewing this within the southern African experience this volume adds new perspectives to the global competition literature It is an essential reference tool and will be of great interest to policymakers and regulators as well as the rapidly growing ecosystem of legal practitioners and economists engaged in the field
