Building Automation Hermann Merz, Thomas Hansemann, Christof Hübner, 2018-04-17. This book offers all important industrial communication systems for buildings in one single book. It stimulates a basic understanding of network and bus systems for the automation of buildings. After an introduction to EIB, KNX, LON, and BACnet technologies, the authors illustrate how these systems can be utilized for specific applications like air conditioning or illumination. This book assumes only a basic knowledge of mathematics and thanks to its simple explanations and many examples is ideal for students and professional engineers who require practical solutions. Numerous practical examples explain basic concepts of industrial communication technology as well as the procedure for the transmission of digital data. All chapters have been thoroughly revised for the 2nd edition, and the book includes the latest technical developments and standards.
