FOOD PRESERVATION TECHNIQUES WITH PLANT ESSENTIAL OILS

JU JIAN, 2019-09-04 Consumer preferences for cleaner label products require the food industry to replace synthetic preservatives with natural substitutes Compared with other types of food preservatives plant essential oils are becoming more and more popular because they meet the current development requirements of food additives on green safe and healthy However there are still many problems to be solved urgently in the application of essential oil in food preservation industry For example plant essential oils usually have strong odor are sensitive to light and heat are easy to oxidize and decompose have strong volatility and short effect and the minimum inhibitory concentration in food matrix is usually higher than the minimum inhibitory concentration in vitro Therefore in order to solve these problems effectively and meet the learning needs of engineering technicians in food industry and scientific researchers in higher education the author has compiled this monograph which integrates the application and academic value combining years of research experience in plant essential oil research and food preservation

Dietary Phytochemicals and Microbes Amlan K. Patra, 2012-03-22 Humans have utilized the bioactive principles of different plants for various beneficial physiological properties including antimicrobial properties for many centuries However interests of using medicinal plants declined in the 20th century with the availability of effective synthetic antimicrobial drugs The development of microbial resistance to various drugs has accelerated research interests towards the use of phytochemicals as alternatives to synthetic drugs in the recent years This book presents an

comprehensive reviews on the antimicrobial and antiviral properties of numerous recently reported phytochemicals and their mechanisms of antimicrobial actions. Some of the chapters have critically discussed the beneficial and adverse effects of antibacterial and stimulatory activities of dietary phytochemicals on rumen microbial populations and gut microbial populations of humans and animals. Microbial adaptation and resistance of microbes to phytochemicals has also been highlighted. On the applied aspects, the use of phytochemicals against drug resistance microbes to treat microbial diseases for food preservation to inhibit methanogenic archaea in the rumen and to modulate lipid biohydrogenating microbial populations to increase conjugated linoleic acids in animal derived foods have been presented in different chapters.

Botanical Medicine in Clinical Practice Ronald Ross Watson, Victor R. Preedy, 2008. The potential benefits of plants and plant extracts in the treatment and possible prevention of many leading health concerns are historically well known and are becoming more widely studied and recognized within the medical community. Bioprospecting of Tropical Medicinal Plants Karuppusamy Arunachalam, Xuefei Yang, Sreeja Puthanpura Sasidharan, 2023-08-30. This book focuses on natural products in particular medicinal plants and their derived products as an indispensable source of bioactive molecules that serve as either drug candidates or lead compounds for drug design and discovery. There are several advantages for plant derived therapeutics including wide availability, diverse pharmacological actions and a generally good profile of safety and tolerability. Over the recent years there have been numerous reports from clinical studies testifying the efficacy and safety of medicinal plants and phytochemicals in treating human diseases. A plethora of basic studies has also unraveled molecular mechanisms underlying the health benefits of herbal medicines. Nevertheless, issues such as identification of bioactive ingredients, standardization of the products and drug interactions remain to be systematically documented. *Bioprospecting of Tropical Medicinal Plants* represents a comprehensive analysis of natural products, mainly medicinal plants and phytochemicals. It includes detailed medicinal properties and pharmacological action from in vitro models to clinical trials. The goal is to present the readers a carefully curated collection of plant derived natural products and their underlying molecular mechanisms.
