### **Evaluation Engineering ,1994      Evaluation of Hash Functions for Multipoint Sampling in IP Networks**

Christian Henke,2012-03-02 Diploma Thesis from the year 2008 in the subject Computer Science Applied grade 1 Technical University of Berlin language English abstract Network Measurements play an essential role in operating and developing today s Internet A variety of measurement applications demand for multipoint network measurements e g service providers need to validate their delay guarantees from Service Level Agreements and network engineers have incentives to track where packets are changed reordered lost or delayed Multipoint measurements create an immense amount of measurement data which demands for high resource measurement infrastructure Data selection techniques like sampling and filtering provide efficient solutions for reducing resource consumption while still maintaining sufficient information about the metrics of interest But not all selection techniques are suitable for multipoint measurements only deterministic filtering allows a synchronized selection of packets at multiple observation points Nevertheless a filter bases its selection decision on the packet content and hence is suspect to bias i e the selected subset is not representative for the whole population Hash based selection is a filtering method that tries to emulate random selection in order to obtain a representative sample for accurate estimations of traffic characteristics The subject of the thesis is to assess which hash function and which packet content should be used for hash based selection to obtain a seemingly random and unbiased selection of packets This thesis empirically analyzes 25 hash functions and different packet content combinations on their suitability for hash based selection Experiments are based on a collection of 7 real traffic groups from different networks      *The Engineering Design Primer* K. L. Richards,2020-01-30 Created to support senior level courses modules in product design K L Richard s Engineering Design Primer reflects the author s deep experience in engineering product management and design The combination of specific engineering design processes within the broader context of creative team based product design makes this book the ideal resource for project based coursework Starting with design concepts and tasks the text then explores materials selection optimisation reliability statistics testing and economic factors all supported with real life examples Student readers will gain a practical perspective of the work they ll be doing as their engineering careers begin Features Presents the design development and life cycle management of engineered products Builds the skills and knowledge needed for students to succeed in their capstone design projects Brings design concepts alive with practical examples and descriptions Emphasises the team dynamics needed in engineering practice Examines probability reliability testing and life cycle management of engineered products      [IAENG Transactions on Engineering Sciences](#) Sio-long Ao,Alan Hoi-Shou Chan,Hideki Katagiri,Li Xu,2014-04-07 Two large international conferences on Advances in Engineering Sciences were held in Hong Kong March 13 15 2013 under the International MultiConference of Engineers and Computer Scientists IMECS 2013 and in London U K 3 5 July 2013 under the World Congress on Engineering 2013 WCE 2013 respectively IMECS 2013 and WCE 2013 were organize
