Studies in International Macroeconomics Jagdeep S. Bhandari, 1987 One of the most important developments in macroeconomics during the last decade has been the introduction of the rational expectations approach Before the introduction of this method economists relied on a variety of ad hoc mechanisms which often led to errors in their predictions *Studies in International Macroeconomics* explains the ways in which the rational expectations method deals with uncertainty It presents stochastic models and applies them to current issues such as exchange rate determination the effects of the rise and fall in oil prices and the impact of wage indexing on the economy

Three Essays in International Macroeconomics and Finance Enrique Martinez-Garcia,2007 *The International Macroeconomics of Taxation and the Case Against European Tax Harmonization* Enrique G. Mendoza,2001 The theory of international macroeconomics shows that domestic tax policy in a global economy affects foreign economic conditions via complex dynamic interactions through relative prices tax revenues and wealth distribution This paper proposes a tractable quantitative framework for assessing tax policies that is consistent with this theory The significance of the international transmission channels of tax policy is evaluated in the context of a workhorse two country dynamic general equilibrium model The model is used to assess the potential effects of the European harmonization of capital income taxes The results show that this policy if enacted along the lines followed in harmonizing value added taxes yields large capital outflows and a significant erosion of tax revenue for Continental Europe while the opposite effects benefit the United Kingdom Welfare in the United Kingdom rises as result while Continental Europe may incur a substantial welfare cost

Rational Expectations Models with a Continuum of Convergent Solutions Michael Mussa, 1984 This paper examines five examples of rational expectations models with a continuum of convergent solutions and demonstrates serious difficulties in the economic interpretation of these solutions The five examples are 1 a model of optimal capital accumulation with a negative rate of time preference 2 Taylor s 1977 linear rational expectations model of macroeconomic equilibrium 3 Calvo s 1984 model of contract setting and price dynamics 4 Obstfeld s 1984 equilibrium model of monetary dynamics with individual optimizing agents and 5 Calvo s 1978 life cycle model of savings and asset valuation In every case when these models yield a continuum of convergent infinite horizon solutions these solutions fail to exhibit economically appropriate forward looking dependence of the endogenous variables on the paths of the exogenous forcing variables a difficulty that does not arise under the circumstances where these models yield unique convergent infinite horizon solutions Further the three models that have natural finite horizon versions either lack finite horizon solutions or have solutions that do not converge to any of the infinite horizon solutions Again this difficulty arises only under the circumstances where these models have a continuum of infinite horizon solutions
