*Introduction to Engineering Materials* Vernon John,1983-09-30 A text which deals with the basic principles of materials science and technology in a simple yet thorough manner This edition includes more worked examples and more detailed information on certain aspects of materials science      *Introduction to Engineering Materials* Vernon Bowen John,1974

*Applied Mechanics Reviews* ,1985      *Basic Solid Mechanics* David Rees,1997-11-11 Written with the aim of broadening the subject base this book focuses on those areas where topics in mechanical aeronautical and civil engineering employ common principles Theoretical topics in solid mechanics are illustrated through many worked examples and exercises chosen to assist the reader in recognising the necessary problem solving techniques The book is therefore suitable for both single discipline and broad based courses that include mechanics as applied in engineering and design The underlying theme is to show how the load carrying capacity of materials and structures used in engineering may be determined      **New**

**Developments in Ferromagnetism Research** V. N. Murray,2005 Ferromagnetism is a form of magnetism that can be acquired in an external magnetic field and usually retained in its absence so that ferromagnetic materials are used to make permanent magnets A ferromagnetic material may therefore be said to have a high magnetic permeability and susceptibility which depends upon temperature Examples are iron cobalt nickel and their alloys Ultimately ferromagnetism is caused by spinning electrons in the atoms of the material which act as tiny weak magnets They align parallel to each other within small regions of the material to form domains or areas of stronger magnetism In an unmagnetised material the domains are aligned at random so there is no overall magnetic effect If a magnetic field is applied to that material the domains align to point in the same direction producing a strong overall magnetic effect Permanent magnetism arises if the domains remain aligned after the external field is removed Ferromagnetic materials exhibit hysteresis In 2004 it was discovered that a certain allotrope of carbon nanofoam exhibited ferromagnetism The effect dissipates after a few hours at room temperature but lasts longer at cold temperatures The material is also a semiconductor It is thought that other similarly formed materials of boron and nitrogen may also be ferromagnetic This new book rings together leading research from throughout the world

**Dissipative Processes in Tribology** D. Dowson,G. Dalmaz,P.R.N. Childs,C.M. Taylor,M.
