- ★ What is research design?
  - A research design is to plan to attempt to find the answers to the researchers questions and/or to test research hypotheses that were formulated
  - Includes:
    - How research sample will be selected
    - How and when variables will be measured
    - How data will be analyzed
    - How findings will be disseminated
- ★ Different categorizations of research design
- ★ Cross-sectional research design
  - Variables are measured just one time and as simultaneously as possible
  - Conclusions may include a description of the distribution of certain variables
  - May answer questions or hypotheses regarding the relationship between variables
- ★ Pre test post test research design
  - Variables are measured 2 times, generally before and after some event
  - The event is usually an intervention that is offered to the client or some life experiences to which the client is exposed
  - Allows us to measure the amount of change that occurred between the 1st and 2nd measurement
- ★ Longitudinal research design
  - Variables are measured more than 2 times, usually many more, and over a long period of time
  - Longitudinal studies are designed to identify how much change occurred, and what phenomenon were associated with change
  - Types of longitudinal designs
    - Trend studies
    - Cohort studies
    - Panel studies
- ★ Exploratory research designs
  - Used when a researcher is exploring a subject area that is relatively new and unstudied
  - They can be qualitative or quantitative and often use mixture of both methods
  - Designed to begin the process of knowledge building about research problem or question
- ★ Descriptive research designs
  - Used to describe situations and events
  - In quantitative descriptive studies, the goal is usually to describe and measure relevant variables
  - In qualitative descriptive studies, the goal is usually to describe the variety of ways people experience or perceive something
