Elements of Dynamic Optimization Alpha C. Chiang, 2000      *Dynamic Optimization* Arthur Earl Bryson, 1999 Dynamic Optimization takes an applied approach to its subject offering many examples and solved problems that draw from aerospace robotics and mechanics The abundance of thoroughly tested general algorithms and Matlab codes provide the reader with the practice necessary to master this inherently difficult subject while the realistic engineering problems and examples keep the material interesting and relevant FEATURES BENEFITS Covers dynamic programming relating it to the calculus of variations and optimal control and neighboring optimum control differential dynamic programming a practical method for nonlinear feedback control Includes a disk that contains 40 gradient and shooting codes as well as codes that solve the time varying Riccati equation the DYNOPT Toolbox These codes have been thoroughly tested on hundreds of problems Contains many realistic examples and problems Solutions to the examples and problems as well as the codes that produce the figures are included on the accompanying disk Covers dynamic optimization with inequality constraints and singular arcs using inverse dynamic optimization differential inclusion      Dynamic Optimization for Beginners Piermarco Cannarsa, Filippo Gazzola, 2021      *Elements of Dynamic Optimization* Alpha C. Chiang, 2000      Dynamic Optimization Wei Xu, Vasanth Bala, Institute of Electrical and Electronics Engineers, 2001      Necessary Conditions in Dynamic Optimization Francis Clarke, 2005 This monograph derives necessary conditions of optimality for a general control problem formulated in terms of a differential inclusion These conditions constitute a new state of the art subsuming unifying and substantially extending the results in the literature The Euler Weierstrass and transversality conditions are expressed in their sharpest known forms No assumptions of boundedness or convexity are made no constraint qualifications imposed and only weak pseudo Lipschitz behavior is postulated on the underlying multifunction The conditions also incorporate a stratified feature of a novel nature in which both the hypotheses and the conclusion are formulated relative to a given radius function When specialized to the calculus of variations the results yield necessary conditions and regularity theorems that go significantly beyond the previous standard They also apply to parametrized control systems giving rise to new and stronger maximum principles of Pontryagin type The final chapter is devoted to a different issue that of the Hamiltonian necessary condition It is obtained here for the first time in the case of nonconvex values and in the absence of any constraint qualification this has been a longstanding open question in the subject Apart from the final chapter the treatment is self contained and calls upon only standard results in functional and nonsmooth analysis
