The study described in this book arose in the context of a three year collective effort to bring about change in science teaching at Mountain Elementary School 1 This opportunity emerged after I contacted the school with the idea to help teachers implement student centered science teaching At the same time the teachers collectively had come to realize that their science teaching was not as exciting to children as it could be They had recognized their own teaching as textbook based with little use of the hands on approaches prescribed by the provincial curriculum At this point the teachers and I decided that a joint project would serve our mutual goals they wanted assistance in changing from textbook based approaches to student centered activities I wanted to collect data on learning in student centered knowledge producing classroom communities I brought to this school my new understandings about classroom communities from several earlier studies conducted in a private high school e g Roth Roth Roychoudhury 1992 I wanted to help teachers create science learning environments in which children took charge of their learning where children learned from more competent others by participating with them in ongoing activities and teachers were responsible for setting up and maintaining a classroom community rather than for disseminating information After I had completed the data collection for the present study I watched a documentary about an elementary school in the small French village of Moussac Envoye Special TV5 September 14 1994
