

OpenText Vendor Invoice Management for SAP® Solutions

Accelerate invoice processing, exceptions, and approvals

OpenText Vendor Invoice Management for SAP® Solutions (VIM) streamlines accounts payable (AP) operations for SAP customers. VIM optimizes and simplifies the process of receiving, managing, monitoring and routing invoices and related documentation.

With VIM, invoices are processed more efficiently and quickly. The right people collaborate through a secure, easy to use interface to resolve problems, obtain invoice status, check purchase order numbers, and approve invoices and more. The optional optical character recognition software (OCR) uses the most advanced document and character recognition capabilities available and virtually eliminates human intervention in the invoice capture stage for invoices received as paper or attached to e-mails.

Invoice processing generally follows the 80/20 rule—eighty percent of procurement billing may be processed without a problem. The other twenty percent creates problems or exceptions that require eighty percent of the invoice management resources to resolve. Examples of invoice problems include invoice disputes; invoices submitted without purchase orders (PO); insufficient approvals; cost center errors; duplicates; discrepancies in quantity, price, or date; freight mismatch; special tax conditions; and PO allocation errors. All of these conditions lead to invoice management problems that require time and resources to remedy.

For most companies, invoice processing requires too much manual effort, causing a drain on resources internally and for the vendor involved. One of the most labor-intensive manual processing steps is the keying of data from paper invoices into SAP ERP. Other manual processing and resolution efforts involve time-consuming historical research, communication with the vendor, process documentation, requests for additional information from multiple parties, manual routing, and the labor-intensive process of monitoring and providing update reports on the status of unpaid invoices. AP specialists can spend most of their time addressing these problems, while vendors and buyers experience a wide range of disincentives and disadvantages.

Minimize invoice processing time, optimize efficiency

VIM reduces the time required to process invoices, through rapid invoice data capture and automated invoice routing based on business rules and roles. OpenText Invoice Capture Center for SAP Solutions (ICC) fully integrates invoice data capture into the process. The combined solution of VIM and ICC enables you to significantly reduce

“Our invoice processing operations went from 100 percent paper-based to 100 percent non-paper-based and we were able to reduce our total staff from thirteen FTEs to only five. We’ve decreased invoice processing costs by over 50 percent, driven mainly by headcount reduction, but also due to instituting a more automated process that reduces errors.”

Invoice Verification for SAP Stephen Birchall, Invoice verification in SAP is an often misunderstood subject despite its central role in contributing to a company's fiscal health Adding to the confusion is the fact that it falls between two teams the MM team and the FI team and each assumes that the other is responsible for the design and configuration of Invoice Verification Although the process can be streamlined many organizations get the design and use of invoice verification wrong resulting in vendors not being paid and accounts being placed on stop which prevents further Purchase Orders from being processed until the vendor has been paid The aim of this book is to help readers fully understand the invoice verification process particularly the changes in ERP 6.0 If they get the design right then the process will run smoothly and vendors will be paid on time not too early either User input can be kept to a minimum and much of the process can be automatic There are one or two basic mistakes that are made during the design of the process and the guide highlights these and many other confusing areas and describes in simple terms the options available along with the consequences of getting it wrong
