Bacterial morphology

Characterization of prokaryotic cells (all bacteria are prokaryotes)

- Size (diameter)
 - Most species have diameter of 1µm.
 - The smallest bacteria are 0.1 µm (*Mycoplasma*)
 - The larger bacteria may reach up to 10 µm.

- Shape + arrangement- the shape is determined by the murein sac arrangement.
 - Coccus – spherical shape – 0.5-1.5 µm

- Cluster (staph)
- Chain (strep, enterococci)- reproduction in one plane and late separation.
- Diplococci – (*S. pneumoniae, Neisseria*), may be encapsulated!
- Tetrad

- Bacillus/rods

- Chain (streptobacilli)- *Bacillus anthracis* and *Cereus*.
- Row (palisades)
- Diplobacilli
- Coccobacillus – somewhere between coccus and bacillus (*Bordetella, brucella, Francisella, Haemophilus*)- the respiratory bacteria+ zoonotics.

- Spirochete – double membrane + helical-coiled cell (*Leptospira, borrelia burgdorferi et recurrentis, treponema*)

Structures of prokaryotic cells

*not all bacteria have all the organelles described below (common organelles to all bacteria are: cell membrane, cytoplasm, ribosomes, nucleoid (bacterial chromosome)).

*prokaryotic cell lack membrane-enclosed organelles.

Organism and Environment Russell Winslow, 2017-08-29 *Organism and Environment* performs an examination into the way the contemporary life sciences are heralding a revolution of the most basic philosophical concepts of the Western world Analyzing recent research in microbiology and evolution theory the present book argues that these discourses are adding their voices to a growing chorus which is announcing a disruption if not an end to the understanding of the order of the world articulated in humanism What does it mean to be a living substance Are there such things as living individuals How are living beings free The discourses of microbiology the medical sciences and evolution theory are revealing a living organism that escapes the limited frame that Enlightenment humanism has traditionally used to answer these and other ontological questions Appealing to the theoretical lenses provided by Michel Foucault Hans Georg Gadamer and Gilles Deleuze *Organism and Environment* offers an interpretation of the way the contemporary life sciences are giving articulation to a posthuman ontological order

Molecular Approaches to the Study of the Ocean K.E. Cooksey, 2012-12-06 Marine biological science is now studied at the molecular level and although research scientists depend on information gained using molecular techniques there is no book explaining the philosophy of this approach *Molecular Approaches to the Study of the Ocean* introduces the reasons why molecular technology is such a powerful tool in the study of the oceans describing the types of techniques that can be used why they are useful and gives examples of their application Molecular biological techniques allow phylogenetic relationships to be explored in a manner that no macroscopic method can although the book deals with organisms near the base of the marine food web the ideas can be used in studies of macroorganisms as well as those in freshwater environments
