This document describes the development process for OpenWrt. It covers the build system, the package management system, and the various tools and utilities used in the development process.

## OpenWrt Development Environment

OpenWrt development is done in a collection of subdirectories, each with its own set of files and directories. The main directory is `openwrt`, which contains the build system, the package management system, and the various tools and utilities used in the development process. The subdirectories are: `bin`, `build`, `feeds`, `image`, `lib`, and `rootfs`. Each subdirectory has its own set of files and directories, and they are all interconnected.

Figure 1: OpenWrt directory structure. The root directory is the `openwrt` directory, which contains the build system, the package management system, and the various tools and utilities used in the development process.

- `bin`: contains all the binaries used in the development process.
- `build`: contains all the build system files, including the `Makefile`, the `build` script, and the various tools and utilities used in the development process.
- `feeds`: contains all the package feeds used in the development process.
- `image`: contains all the image files used in the development process.
- `lib`: contains all the library files used in the development process.
- `rootfs`: contains all the root filesystem files used in the development process.
