A Volterra Approach to Digital Predistortion Carlos Crespo Cadenas, Maria Jose Madero Ayora, Juan A.

Becerra, 2025-01-15 Thorough discussion of the theory and application of the Volterra series for impairments compensation in RF circuits and systems A Volterra Approach to Digital Predistortion Sparse Identification and Estimation offers a comprehensive treatment of the Volterra series approach as a practical tool for the behavioral modeling and linearization of nonlinear wireless communication systems Although several perspectives can be considered when analyzing nonlinear effects this book focuses on the Volterra series to study systems with real valued continuous time RF signals as well as complex valued discrete time baseband signals in the digital signal processing field A unified framework provides the reader with in depth understanding of the available Volterra based behavioral models in particular the book emphasizes those models derived by exploiting the knowledge of the physical phenomena that produce different types of nonlinear distortion From these distinctive standpoints this work remarkably contributes to theoretical issues of behavioral modeling The book contributes to practical state of the art questions on linearization granting the reader practical guidance in designing digital predistortion schemes and adopting up to date machine learning methods to exploit the sparsity of the identification problem and reducing computational complexity Later chapters include information on Identification of Volterra based models as a linear regression problem allowing the adoption of sparse machine learning methods to reduce computational complexity while keeping rich model structures Deduction of Volterra models based on circuit model knowledge offering pruned model structures that are better fitted for specific scenarios Wireless communication systems and the nonlinear effects produced by power amplifiers mixers frequency converters or IQ modulators Digital predistortion schemes and experimental results for both indirect and direct learning architectures A Volterra Approach to Digital Predistortion Sparse Identification and Estimation is an essential reference on the subject for engineers and technicians who develop new products for the linearization of wireless transmitters as well as researchers and students in fields and programs of study related to wireless communications

Modelling and Control of Dynamic Systems Using Gaussian Process Models Juš

Kocijan, 2015-11-21 This monograph opens up new horizons for engineers and researchers in academia and in industry dealing with or interested in new developments in the field of system identification and control It emphasizes guidelines for working solutions and practical advice for their implementation rather than the theoretical background of Gaussian process GP models The book demonstrates the potential of this recent development in probabilistic machine learning methods and gives the reader an intuitive understanding of the topic The current state of the art is treated along with possible future directions for research Systems control design relies on mathematical models and these may be developed from measurement data This process of system identification when based on GP models can play an integral part of control design

in data based control and its description as such is an essential aspect of the text The background of GP regression is introduced first with system identification and incorporation of prior knowledge then leading into full blown control The book is illustrated by extensive use of examples line drawings and graphical presentation of computer simulation results and plant measurements The research results presented are applied in real life case studies drawn from successful applications including a gas liquid separator control urban traffic signal modelling and reconstruction and prediction of atmospheric ozone concentration A MATLAB toolbox for identification and simulation of dynamic GP models is provided for download

Functional and High-Dimensional Statistics and Related Fields Germán Aneiros,Ivana Horová,Marie Hušková,Philippe Vieu,2020-06-19 This book presents the latest research on the statistical analysis of functional high dimensional and other complex data addressing methodological and computational aspects as well as real world applications It covers topics like classification confidence bands density estimation depth diagnostic tests dimension reduction estimation on manifolds high and infinite dimensional statistics inference on functional data networks operatorial statistics prediction regression robustness sequential learning small ball probability smoothing spatial data testing and topological object data analysis and includes applications in automobile engineering criminology drawing recognition economics environmetrics medicine mobile phone data spectrometrics and urban environments The book gathers selected refereed contributions presented at the Fifth International Workshop on Functional and Operatorial Statistics IWFO in Brno Czech Republic The workshop was originally to be held on June 24 26 2020 but had to be postponed as a consequence of the COVID 19 pandemic Initiated by the Working Group on Functional and Operatorial Statistics at the University of Toulouse in 2008 the IWFO workshops provide a forum to discuss the latest trends and advances in functional statistics and related fields and foster the exchange of ideas and international collaboration in the field

Association Analysis Techniques and Applications in Bioinformatics

Qingfeng Chen,2024-04-25 Advances in experimental technologies have given rise to tremendous amounts of biology data This not only offers valuable sources of data to help understand biological evolution and functional mechanisms but also poses challenges for accurate and effective data analysis This book offers an essential introduction to the theoretical and practical aspects of association analysis including data pre processing data mining methods algorithms and tools that are widely applied for computational biology It covers significant recent advances in the field both foundational and application oriented helping readers understand the basic principles and emerging techniques used to discover interesting association patterns in diverse and heterogeneous biology data such as structure function correlations and complex networks with gene protein regulation The main results and approaches are described in an easy to follow way and accompanied by sufficient references and suggestions for future research This carefully edited monograph is intended to provide investigators in the fields of data mining machine learning artificial intelligence and bioinformatics with a profound guide to the role of association analysis in computational biology It is also very useful as a general source of information on association analysis

and as an overall accompanying course book and self study material for graduate students and researchers in both computer science and bioinformatics

Assessing Students' Digital Reading Performance Jie HU,2022-12-30 This book provides a systematic study of the Programme for International Student Assessment PISA based on big data analysis aiming to examine the contextual factors relevant to students digital reading performance The author first introduces the research landscape of educational data mining EDM and reviews the PISA framework since its launch and how it has become an important metric to assess the knowledge and skills of students from across the globe With a focus on methodology and its applications the book explores extant scholarship on the dynamic model of educational effectiveness multi level factors of digital reading performance and the application of EDM approaches The core chapter on the methodology examines machine learning algorithms hierarchical linear modeling mediation analysis and data extraction and processing for the PISA dataset The findings give insights into the influencing factors of students digital reading performance allowing for further investigations on improving students digital reading literacy and more attention to the advancement of education effectiveness The book will appeal to scholars professionals and policymakers interested in reading education educational data mining educational technology and PISA as well as students learning how to utilize machine learning algorithms in examining the mass global database

The International Governance of Artificial Intelligence Mark

Chinen,2023-06-01 This timely book investigates emerging efforts to govern artificial intelligence AI at an international level It aptly emphasizes the complex interactions involved when creating international laws exploring potential and current developments in AI regulation

Applications of Advanced Technology in Transportation Kelvin C. P. Wang,Samer Madanat,Shashi Sathisan Nambisan,Gary Spring,2002 This collection contains 121 technical papers presented at the Seventh International Conference on Applications of Advanced Technology in Transportation held in Boston Massachusetts August 5 7 2002

Basic Knowledge on FinTech TABF Editorial Board,Hank C.C Huang,2020-04-01 As the field of FinTech continues its progress financial institutions must not only enhance their digitization but also make serious efforts to understand the resulting new opportunities it creates In line with these developments TABF has published the book Basic knowledge on FinTech which was designed by us as a reference for the FinTech Knowledge Test Co authored by TABF staff and other experts it features balanced and credible analysis avoiding trivia and overly complex concepts while emphasizing readability The content structure is based on the World Economic Forum WEF s roadmap for FinTech development adding in TABF s research findings plus other domestic and international trends and practices Not only is Basic knowledge on FinTech suitable for financial proficiency testing but it can also be used as a textbook in university courses supplementing theoretical knowledge with up to date practical knowledge in this rapidly changing field

Cybersecurity Systems for Human Cognition Augmentation Robinson E. Pino,Alexander Kott,Michael Shevenell,2014-10-18 This book explores cybersecurity research and development efforts including ideas that deal with the growing challenge of how computing engineering can merge with

neuroscience The contributing authors who are renowned leaders in this field thoroughly examine new technologies that will automate security procedures and perform autonomous functions with decision making capabilities To maximize reader insight into the range of professions dealing with increased cybersecurity issues this book presents work performed by government industry and academic research institutions working at the frontier of cybersecurity and network sciences Cybersecurity Systems for Human Cognition Augmentation is designed as a reference for practitioners or government employees working in cybersecurity Advanced level students or researchers focused on computer engineering or neuroscience will also find this book a useful resource Genetic Programming 1997 John R.
