

Computing Discounts Activity

Context

When purchasing items, it is often not clear how much the total price will be after discounts are applied. For example, suppose a \$100 item is discounted 10% and then 20% off the total price. The difference between the original price and the total price is called the savings. Alternatively, when two successive discounts are applied, the percentage saved is 30%, not 30% which represents the percentage saved by each discount independently. The savings percentage is the percent by which the price is reduced by the retailer.

Example: Suppose a \$100 item is discounted 10% and then 20%.

10% off \$100 = \$90. Then 20% off \$90 = \$72. Total saving = 28%.

Equivalent Percentage: A percentage p is called **equivalent** to p_1 and p_2 if $p = p_1 + p_2 + p_1 p_2$.

For example, 30% is equivalent to 10% and 20% because $30 = 10 + 20 + 10 \cdot 20$.

For 30% to be equivalent to p_1 and p_2 means that $p_1 + p_2 + p_1 p_2 = 30$.

Figure 1: Equivalent Pair (10% and 20%)

Item	Price before	Market	Discount %
Apple	\$100.00	\$90.00	10%
Apple	\$90.00	\$72.00	20%
Apple	\$100.00	\$72.00	28%
Computer	\$1000.00	\$720.00	28%
Computer	\$1000.00	\$720.00	28%
Computer	\$1000.00	\$720.00	28%

Figure 2: Equivalent Pair (28% and 28%)

In this activity, you will be asked to identify which of the items have equal savings relative to the original price. You will also be asked to identify which items have the same price after two successive discounts. You will also be asked to identify which items have the same price after two successive discounts.

1. Which items have equal savings relative to the original price? (You will be asked to identify which items have equal savings relative to the original price.)
2. Which items have the same price after two successive discounts? (You will be asked to identify which items have the same price after two successive discounts.)
3. Which items have the same price after two successive discounts? (You will be asked to identify which items have the same price after two successive discounts.)
4. Which items have the same price after two successive discounts? (You will be asked to identify which items have the same price after two successive discounts.)
5. Which items have the same price after two successive discounts? (You will be asked to identify which items have the same price after two successive discounts.)
6. Which items have the same price after two successive discounts? (You will be asked to identify which items have the same price after two successive discounts.)
