Who's #1? Amy N. Langville, Carl D. Meyer, 2013-12-01 The mathematics behind today s most widely used rating and ranking methods A website s ranking on Google can spell the difference between success and failure for a new business NCAA football ratings determine which schools get to play for the big money in postseason bowl games Product ratings influence everything from the clothes we wear to the movies we select on Netflix Ratings and rankings are everywhere but how exactly do they work *Who s 1* offers an engaging and accessible account of how scientific rating and ranking methods are created and applied to a variety of uses Amy Langville and Carl Meyer provide the first comprehensive overview of the mathematical algorithms and methods used to rate and rank sports teams political candidates products Web pages and more In a series of interesting asides Langville and Meyer provide fascinating insights into the ingenious contributions of many of the field s pioneers They survey and compare the different methods employed today showing why their strengths and weaknesses depend on the underlying goal and explaining why and when a given method should be considered Langville and Meyer also describe what can and can t be expected from the most widely used systems The science of rating and ranking touches virtually every facet of our lives and now you don t need to be an expert to understand how it really works *Who s 1* is the definitive introduction to the subject It features easy to understand examples and interesting trivia and historical facts and much of the required mathematics is included *Foundations of Quantitative Finance, Book VI: Densities, Transformed Distributions, and Limit Theorems* Robert R. Reitano, 2024-11-12 Every finance

professional wants and needs a competitive edge A firm foundation in advanced mathematics can translate into dramatic advantages to professionals willing to obtain it Many are not and that is the competitive edge these books offer the astute reader Published under the collective title of Foundations of Quantitative Finance this set of ten books develops the advanced topics in mathematics that finance professionals need to advance their careers These books expand the theory most do not learn in graduate finance programs or in most financial mathematics undergraduate and graduate courses As an investment executive and authoritative instructor Robert R Reitano presents the mathematical theories he encountered and used in nearly three decades in the financial services industry and two decades in academia where he taught in highly respected graduate programs Readers should be quantitatively literate and familiar with the developments in the earlier books in the set While the set offers a continuous progression through these topics each title can be studied independently Features Extensively referenced to materials from earlier books Presents the theory needed to support advanced applications Supplements previous training in mathematics with more detailed developments Built from the author s five decades of experience in industry research and teaching Published and forthcoming titles in the Robert R Reitano Quantitative Finance Series Book I Measure Spaces and Measurable Functions Book II Probability Spaces and Random Variables Book III The Integrals of Riemann Lebesgue and Riemann Stieltjes Book IV Distribution Functions and Expectations Book V General Measure and Integration Theory Book VI Densities Transformed Distributions and Limit Theorems Book VII Brownian Motion and Other Stochastic Processes Book VIII It Integration and Stochastic Calculus 1 Book IX Stochastic Calculus 2 and Stochastic Differential Equations Book X Classical Models and Applications in Finance Topics in Grammatical Inference Jeffrey Heinz, José M. Sempere, 2016-05-04 This book explains advanced theoretical and application related issues in grammatical inference a research area inside the inductive inference paradigm for machine learning The first three chapters of the book deal with issues regarding theoretical learning frameworks the next four chapters focus on the main classes of formal languages according to Chomsky s hierarchy in particular regular and context free languages and the final chapter addresses the processing of biosequences The topics chosen are of foundational interest with relatively mature and established results algorithms and conclusions The book will be of value to researchers and graduate students in areas such as theoretical computer science machine learning computational linguistics bioinformatics and cognitive psychology who are engaged with the study of learning especially of the structure underlying the concept to be learned Some knowledge of mathematics and theoretical computer science including formal language theory automata theory formal grammars and algorithmics is a prerequisite for reading this book *Foundations of Quantitative Finance, Book VII: Brownian Motion and Other Stochastic Processes* Robert R. Reitano, 2016-04-28 This is the seventh book in a set of ten published under the collective title of Foundations of Quantitative Finance The targeted readers are students researchers and practitioners of quantitative finance who find that many sources for financial applications are written at a level assuming significant

mathematical expertise The goal for this series is to provide a complete and detailed development of the many foundational mathematical theories and results one finds referenced in popular resources in finance and quantitative finance The included topics have been curated from vast mathematics and finance literature for the express purpose of supporting applications in quantitative finance The hope is that this series will advance the reader's career The series is logically sequential Books I III and V develop foundational mathematical results needed for the probability theory and finance applications of Books II IV and VI respectively Books VII VIII and IX then develop results in the theory of stochastic processes and Book X develops applications of these stochastic and other models to finance All ten volumes are extensively self referenced Book VII introduces and develops properties of Brownian motion arguably the most famous of stochastic processes as well as two other classes of stochastic processes with properties enjoyed by Brownian motion namely Markov processes and martingales Brownian motion is the central idea needed for most continuous time models in finance and indeed most applications of stochastic processes For some with more experience this book will be the place to start in the series while others will find Books I VI provide a needed foundation Published and forthcoming titles in the Robert R Reitano Quantitative Finance Series Book I Measure Spaces and Measurable Functions Book II Probability Spaces and Random Variables Book III The Integrals of Riemann Lebesgue and Riemann Stieltjes Book IV Distribution Functions and Expectations Book V General Measure and Integration Theory Book VI Densities Transformed Distributions and Limit Theorems Book VII Brownian Motion and Other Stochastic Processes Book VIII It Integration and Stochastic Calculus 1 Book IX Stochastic Calculus 2 and Stochastic Differential Equations Book X Classical Models and Applications in Finance
