managing and performing the stages of a system's life cycle. This is accomplished through the involvement of all interested parties with the ultimate goal of achieving customer satisfaction. This International Standard also provides processes that support the definition, control, and improvement of the life cycle processes used within an organization or a project. Organizations and projects can use these life cycle processes when acquiring and supplying systems. This International Standard concerns those systems that are man-made and may be configured with one or more of the following: hardware, software, data, humans, processes, e.g. processes for providing service to users, procedures, e.g. operator instructions, facilities, materials, and naturally occurring entities. When a system element is software, the software life cycle processes documented in ISO/IEC 12207:2008 may be used to implement that system element. The two standards are harmonized for concurrent use on a single project or in a single organization. When the system element is hardware, refer to other International Standards outside the scope of SC7.

[Guide to Automotive Connectivity and Cybersecurity](#) Dietmar P.F. Möller, Roland E. Haas, 2019-04-03. This comprehensive text reference presents an in-depth review of the state of the art of automotive connectivity and cybersecurity with regard to trends, technologies, innovations, and applications. The text describes the challenges of the global automotive market, clearly showing where the multitude of innovative activities fit within the overall effort of cutting-edge automotive innovations and provides an ideal framework for understanding the complexity of automotive connectivity and cybersecurity. Topics and features discussed include the automotive market, automotive research and development, and automotive electrical, electronic, and software technology. Examines connected cars and autonomous vehicles and methodological approaches to cybersecurity to avoid cyber attacks against vehicles. Provides an overview on the automotive industry that introduces the trends driving the automotive industry towards smart mobility and autonomous driving. Reviews automotive research and development, offering background on the complexity involved in developing new vehicle models. Describes the technologies essential for the evolution of connected cars, such as cyber-physical systems and the Internet of Things. Presents case studies on Car2Go and car sharing, car hailing, and ridesharing, connected parking, and advanced driver assistance systems. Includes review questions and exercises at the end of each chapter. The insights offered by this practical guide will be of great value to graduate students, academic researchers, and professionals in industry seeking to learn about the advanced methodologies in automotive connectivity and cybersecurity.

[Software Project Management](#) Moh'd A. Radaideh, 2023-12-18. Software Project Management (SPM) differs from the Traditional Project Management (PM) approaches in that Software Engineering requires multiple rounds of Software Testing and Updating in accordance with their Testing results and their customer's feedback. Thus, SPM introduces unique life cycle processes. This book presents an introduction and a critical analysis of the main Software Project Management Frameworks and offers the author's original approach to SPM as developed by him over years of professional and teaching experience in the Academia and the IT Software Industry. It also provides Executive Summaries of the Project Management
