Measuring Sustainability Simon Bell, Stephen Morse, 2003. Measuring the sustainability of development is crucial to achieving it and is one of the most actively studied issues in the area. To date most studies of measurements or indicators have been largely theoretical. However, this book follows on to Bell and Morse's highly influential *Sustainability Indicators* 1999, presenting valuable practical advice on how to develop measurements that will work in real life development contexts. It describes and analyses how to derive, validate and apply indicators in the course of an actual development project, in this case the Mediterranean Action Plan in Malta. The authors explain the trade offs and constraints involved and how it is possible to combine the open ended and flexible perspectives of sustainability with the more linear processes and fixed targets of specific projects through the use of pragmatic and reflective methodologies.

There are exercises for the reader to apply the approaches with answers and explanations provided.
