**Soil Physics with HYDRUS: Modeling and Applications** By David E. Radcliffe, Jiri Simunek

Numerical models have become much more efficient, making their application to problems increasingly widespread. User-friendly interfaces make the setup of a model much easier and more intuitive while increased computer speed can solve difficult problems in a matter of minutes. Co-authored by the software's creator, Dr. Jirka Šimunek, **Soil Physics with HYDRUS: Modeling and Applications** demonstrates one- and two-dimensional simulations and computer animations of numerical models using the HYDRUS software.

Classroom-tested at the University of Georgia by Dr. David Radcliffe, this volume includes numerous examples and homework problems. It provides students with access to the HYDRUS-1D program as well as the Rosetta Module, which contains large volumes of information on the hydraulic properties of soils. The authors use HYDRUS-1D for problems that demonstrate infiltration, evaporation, and percolation of water through soils of different textures and layered soils. They also use it to show heat flow and solute transport in these systems, including the effect of physical and chemical nonequilibrium conditions. The book includes examples of two-dimensional flow in fields, hillslopes, boreholes, and capillary fringes using HYDRUS (2D/3D). It demonstrates the use of two other software packages, RETC and STANMOD, that complement the HYDRUS series.

Hands-on use of the windows-based codes has proven extremely effective when learning the principles of water and solute movement, even for users with very little direct knowledge of soil physics and related disciplines and with limited mathematical expertise. Suitable for teaching an undergraduate or lower level graduate course in soil physics or vadose zone hydrology, the text can also be used for self-study on how to use the HYDRUS models. With the information in this book, you can run models for different scenarios and with different parameters, and thus gain a better understanding of the physics of water flow and contaminant transport.

**No-till Farming Systems for Sustainable Agriculture** Yash P. Dang, Ram C. Dalal, Neal W. Menzies, 2020-09-03 This book is a comprehensive summary of current global research on no till farming and its benefits and challenges from various agronomic environmental social and economic perspectives It details the characteristics and future requirements of no till farming systems across different geographic and climatic regions and outlines what is needed to increase the uptake of no till farming globally Over 35 chapters this book covers in detail the agronomic and soil management issues that must be resolved to ensure the successful implementation of these systems Important economic environmental social and policy considerations are discussed It also features a series of case studies across a number of regions globally highlighting the challenges and opportunities for no till and how these may vary depending on climate and geopolitical location This book is a remarkable compilation by experts in no till farming systems The promotion and expansion of no till farming systems worldwide will be critical for food security and resource and environmental sustainability This is an invaluable reference for both researchers and practitioners grappling with the challenges of feeding the world's rising population in an environment increasingly impacted by climate change It is an essential reading for those seeking to understand the complexity of no till farming systems and how best to optimise these systems in their region

**Arid Lands Water Evaluation and Management** Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions

**Critical Zone and Ecosystem Dynamics** Timothy White, Antonello Provenzale, 2024-11-28 The critical zone is the thin outer veneer of continental Earth extending from the top of the vegetation canopy to subsurface depths where fresh groundwater circulates It is the heterogeneous amalgamation of landscapes ecosystems and subsurface environments The concept of the critical

zone is relatively new and while thousands of manuscripts have been published from this interdisciplinary field they exist within a wide array of journals and none have comprehensively addressed the intersection between the geosciences and ecosystem science where rock meets life The goal of this contributed book is to promote the great potential that exists in a merger of critical zone and ecosystem science to further scientific discovery by leveraging the strengths of multiple disciplines to address societally relevant questions keep pace with scientific advances and more effectively engage with broader scientific communities and the public The core readership will be collaborative researchers working at the intersection between the greater Earth environmental and ecological sciences and policy and business sectors that draw on science evidence to support sustainable economic development The book also serves further readership that includes scientists from many fields particularly those in early and mid career stages who are interested in environmental sustainability and are seeking to step out from disciplinary research into collaborative cross disciplinary study

**Ecohydrology in a Changing Environment** Shavkat Kenjabaev,2014-11-25 The complex of ecological problems in Central Asia especially in Uzbekistan is linked to rapid ongoing demographic and economic processes However geographical location has its own peculiarity Aridity of the climate in Uzbekistan makes water resources as main limiting factor for sustainable economic development Chub et al 1998 RECCA 2011 Annual precipitation ranging from 80 200 mm in plain to 300 400 mm in foothills and 600 800 mm in mountain rangelands Chub 2007 is considerably lower than the evaporation demand of atmosphere FAO IPTRID et al 2004 Thus agriculture accounting about 90% withdrawal of total available water resources in Uzbekistan is impossible without irrigation Qadir et al 2009 Moreover agricultural production is highly vulnerable to climate change Lioubimtseva Henebry 2009 High fluctuation of precipitation and temperature increase may influence land use in irrigated lands create difficulties in water management at regional and local scales and increase competition of scarce water resources among water users in various sectors
