Statistical Methods S P Gupta, 2011 *Contextualising Educational Studies in India* Pradeep Kumar

Choudhury, Suresh Babu G.S., 2021-06-10 This volume presents an interdisciplinary framework to map out contemporary educational studies in India. Based on conceptual tools, quantitative methods, and ethnographic accounts drawn from extensive fieldwork, it addresses emerging discourses on educational policies, their operation in the everyday functioning of institutions, and actual practices in teaching and learning. Individual chapters discuss the intersectionality in the current educational system of region, gender, class, caste, and minorities. With comparative perspectives and case studies from across states, including under-studied rural and urban regions of India, the book explores a wide range of issues affecting the educational system, including socioeconomic and gender inequalities, the educational status of tribal settlements in the hinterlands, and their respective urban areas, the marginalisation of minorities, challenges in accessing educational avenues and choices, and the model for imparting vocational education and training. It navigates complex sites of discrimination and exclusion in the institutional spaces of the educational system and assesses the consequences of market dynamics and ideological undercurrents. Presenting first-hand information from the field, it evaluates educational policies, practices, and research, investigates challenges and failures, provides suggestions, and fosters critical thinking for a knowledge society. The findings in this book will be of interest to researchers, scholars, and teachers of education, economics, sociology, urban education, and the politics of education, as well as of public policy, governance, and development studies. It will also be useful to research institutions, policymakers, educationists, social scientists, education professionals, and governmental and non-governmental bodies working on education.

Molecular Taxonomy of Ascomycetes and Basidiomycetes: Unveiling Fungal Diversity and Evolution Sinang Hongsanan, Ahmed M. Abdel-Azeem, Steven Miller, 2025-11-24 Accurate identification and classification of fungi in Ascomycetes and Basidiomycetes are crucial due to their significant roles in ecosystems, ranging from organic matter decomposition to symbiotic relationships with plants. Additionally, some fungi can cause diseases, thus it is important to provide accurate identification to contribute to developing innovative solutions safeguarding human health and agricultural systems. However, Ascomycetes and Basidiomycetes show considerable diversity in appearance, behavior, and ecological roles, posing challenges for traditional morphology-based identification, especially when dealing with cryptic or morphologically similar species. This misclassification hinders our understanding of fungal diversity and blocks progress in various fields. Molecular techniques utilizing DNA sequences as unique identifiers offer a promising solution, enabling differentiation of closely related fungal species often indistinguishable through microscopy. These molecular approaches not only reveal hidden diversity but also facilitate the exploration of intricate evolutionary relationships within fungal groups. Despite previous research, many questions regarding fungal species relationships, adaptations, and evolution remain.

unanswered Hence it is crucial to continue discovering new fungal species resolving ambiguities within specific fungal groups and studying their interactions with other organisms This research topic aims to advance the use of molecular techniques for the taxonomy of Ascomycetes and Basidiomycetes By leveraging DNA sequencing and other molecular tools the goal is to address specific questions related to fungal diversity evolutionary relationships and species identification The research will test hypotheses concerning the genetic diversity and phylogenetic relationships within these fungal groups aiming to uncover new species and clarify existing taxonomic ambiguities To gather further insights into the molecular taxonomy of Ascomycetes and Basidiomycetes we welcome effective review and original research articles addressing but not limited to the following themes Molecular identification and classification of fungal species Phylogenetic studies revealing evolutionary relationships Discovery and description of new fungal taxa Genetic diversity and population structure analyses Ecological roles and interactions of fungi with other organisms Advances in molecular techniques and methodologies for fungal taxonomy Revisions and updates to fungal nomenclature and classification systems
