
Writing in the Computer Science Curriculum

William J. Taffe

Why Writing Is Necessary

College students in career-oriented majors such as computer science have two curricular thrusts, professional studies and general education. Writing is an important component of each.

Led by the ubiquitous freshman composition course, writing has long been prominent in American general education. Following this introduction, the term papers usually assigned in literature and history courses build additional skill in a particular type of writing – the research paper. Recently, however, many academics have recognized that writing education cannot be isolated to a few courses and have advocated a much broader approach called “Writing Across the Curriculum.” Ideas advocated by Writing Across the Curriculum proponents are beginning to influence Computer Science curricula.³

Unfortunately, in some science and engineering curricula, the importance of writing is not yet recognized. Perhaps it is because some faculty in technical curricula feel that writing should be taught in general education or that they are not competent to teach writing. Perhaps it is because some technical students have more difficulty with writing than do humanities or social science students, suggesting that more, not less, writing instruction is needed. Perhaps it is because technical students sometimes tend to concentrate more on symbolic expression and less on the develop-

Mastering the Academic Writing Mindset Tsz Nam Chan, Dingming Wu, 2026-02-28 In the undergraduate study of computer science a lecturer only teaches somethings that are in the literature most likely in a open access textbook Those knowledges may have been discovered before in several decades ago A student is deemed to be good if they have perfectly finished assignments and have prepared well for their examinations As an example those students can easily get high grades for all fundamental courses e g programming courses linear algebra probability and statistics data structures and design and analysis of algorithms if they have worked extremely hard for the exercises that are provided in those open access textbooks or in class Therefore the undergraduate students do not need to have creativity e g establish new knowledges for obtaining an undergraduate degree All they need to do is to consolidate their foundation However the most critical transition from undergraduate study to postgraduate study is to create new knowledges which advance the state of the art in the computer science field Moreover postgraduate students need to write papers in a logical way by telling a great story so that other reviewers can accept them In order to accomplish these two tasks students need to change their mindsets for adapting to this new environment In this open access book we discuss this main theme in detail for analyzing the common mistakes that are easily made by new students and show the correct methodology for reading writing papers With this methodology we believe that those students who are dedicated to computer science research can be very productive for publishing top tier papers
