Figure 1. Assignment no 1

2. The areas of bars ab and ac in $\text{mm}^2 \times 10^3$ are as indicated. A varies from 0 to $40 \times 10^3 \text{ mm}^2$. (a) plot the variation in the force in each bar versus A . (b) If the allowable stress is 140 MPa, for approximately what value of A does the system have the highest ratio of load-carrying capacity to weight? Assume the same material is used for all three bars.

An Introduction to Matrix Methods of Structural Analysis Muhammad Akram Tahir, Worsak Kanok-Nukulchai, 2024-12-20 This textbook provides a comprehensive introduction to matrix methods of structural analysis framed within a discrete modeling approach that is well suited for digital computation Two principal procedures namely the Matrix Force Method and the Matrix Displacement Method are thoroughly illustrated for one-dimensional structural systems Among them the Matrix Displacement Method is more widely adopted owing to its straightforward extension to two and three-dimensional structures The book demonstrates how displacements taken as the primary variables enable the formation of local element stiffness matrices in the Direct Stiffness Method In this latter approach individual element contributions are assembled into a system level representation permitting the modeling of virtually any complex structure This direct stiffness methodology underpins the development of today's general purpose finite element programs offering both breadth and depth to structural analysis Features Establishes discrete structural modeling as the basis of finite element methods which are now the industry standard for structural analysis Provides a step-by-step explanation of the Force Method the Displacement Method and the Direct Stiffness Method for 1D members such as beams trusses plane frames grillages and space frames ensuring a clear and accessible learning experience
