Objectives

When you finish studying this chapter, you should be able to:

- Assess when the spatial variation of temperature is negligible, and temperature varies nearly uniformly with time, making the simplified lumped system analysis applicable,
- Obtain analytical solutions for transient one-dimensional conduction problems in rectangular, cylindrical, and spherical geometries using the method of separation of variables, and understand why a one-term solution is usually a reasonable approximation,
- Solve the transient conduction problem in large mediums using the similarity variable, and predict the variation of temperature with time and distance from the exposed surface, and
- Construct solutions for multi-dimensional transient conduction problems using the product solution approach.

Chapter 4 Transient Conduction:

Heat Transfer Naseem Uddin, 2024-01-03 Heat Transfer A Systematic Learning Approach presents valuable tools for understanding heat transfer mechanisms and provides a clear understanding of complex turbulent flows. It gives a comprehensive introduction to topics of heat transfer including conduction, convection, thermal radiation, and nanofluids. Covering both traditional analytical models for canonical flows and modern turbulence modeling approaches for heat transfer, the book discusses complex impinging jet flow, phase change flows, nanofluids, and convective mass transfer flow. The text includes numerous end-of-chapter problems to enhance student understanding and different solving approaches. It offers the basic flow and energy analysis along with useful MAPLE code to facilitate the learning process. The book is intended for senior undergraduate mechanical, aerospace, and chemical engineering students taking courses in heat transfer. Instructors will be able to utilize a Solutions Manual, Jupyter Notebook programmes, and Figure Slides for their courses. The eBook version includes the following enhancements: Pop up glossary terms, Hovering over a highlighted word will reveal the definition in a pop up bubble, Video, Videos are positioned appropriately within the text to enhance understanding and can be played, paused, and rewound using the integrated controls, Quizzes, Multiple choice quiz questions are provided at the end of each chapter to ensure that the reader has grasped key concepts.

Heat Transfer José R. Simões-Moreira, Elí W. Zavaleta-Aguilar, 2025-09-26 This book presents the core principles of heat and mass transfer in a clear and structured manner, making it ideal for engineering courses across various disciplines. Covering both fundamental and advanced concepts, it systematically explores conduction, convection, and radiation for heat transfer, as well as mass diffusion and convection for mass transfer. The first eleven chapters focus on heat transfer, addressing steady state and transient conduction, forced and natural convection, phase change phenomena, heat exchanger design, and thermal radiation. The final chapter introduces mass transfer to maintain thematic continuity. Throughout the book, theoretical explanations are complemented by practical applications, numerical methods, and numerous solved and proposed problems, many drawn from real exam questions. With over 30 years of teaching experience, the first author brings deep expertise to the subject, ensuring a pedagogical approach that supports both learning and problem-solving skills.

Fundamental Principles of Heat Transfer Stephen Whitaker, 2013-10-22 Fundamental Principles of Heat Transfer introduces the fundamental concepts of heat transfer: conduction, convection, and radiation. It presents theoretical developments and example and design problems, and illustrates the practical applications of fundamental principles. The chapters in this book cover various topics such as one-dimensional and transient heat conduction, energy and turbulent transport, forced convection, thermal radiation, and radiant energy exchange. There are example problems and solutions at the end of every chapter dealing with design problems. This book is a valuable introductory course in heat transfer for engineering students.
