

Answers and Explanations - Conceptual Physics Questions

1. 1. C) It continues moving at constant velocity

Explanation: According to Newton's First Law, an object in motion remains in motion unless acted upon by an external force. Since no external force is acting, the spacecraft will keep moving at constant velocity.

2. 2. B) The force from the ground on the horse is unbalanced

Explanation: The horse moves forward because it pushes backward on the ground, and the ground pushes forward on the horse due to Newton's Third Law.

3. 3. C) It remains constant

Explanation: In free fall, the only force acting is gravity, which provides a constant acceleration of 9.8 m/s^2 downward.

4. 4. C) The applied force equals the friction force

Explanation: Since the box moves at constant velocity, there is no net force, meaning the applied force must balance the frictional force.

5. 5. A) Increases

Explanation: The acceleration down an incline is given by $g \cdot \sin(\theta)$. As the incline angle θ increases, $\sin(\theta)$ increases, leading to greater acceleration.

6. 6. C) Both exert equal forces on each other

Explanation: By Newton's Third Law, the car and truck exert equal and opposite forces on each other during a collision.

7. 7. C) It moves slightly backward

Explanation: By Newton's Third Law, when the person jumps forward, the boat experiences an equal and opposite reaction force moving it backward.

8. 8. B) Slow down

Explanation: A force opposite to motion causes negative acceleration (deceleration), reducing the object's speed.

Heywood,2006-01-24 A synthesis of nearly 2 000 articles to help make engineers better educators While a significant body of
knowledge has evolved in the field of engineering education over the years much of the published information has been
restricted to scholarly journals and has not found a broad audience This publication rectifies that situation by reviewing the
findings of nearly 2 000 scholarly articles to help engineers become better educators devise more effective curricula and be
more effective leaders and advocates in curriculum and research development The author s first objective is to provide an
illustrative review of research and development in engineering education since 1960 His second objective is with the
examples given to encourage the practice of classroom assessment and research and his third objective is to promote the
idea of curriculum leadership The publication is divided into four main parts Part I demonstrates how the underpinnings of
education history philosophy psychology sociology determine the aims and objectives of the curriculum and the curriculum s
internal structure which integrates assessment content teaching and learning Part II focuses on the curriculum itself
considering such key issues as content organization trends and change A chapter on interdisciplinary and integrated study
and a chapter on project and problem based models of curriculum are included Part III examines problem solving creativity
and design Part IV delves into teaching assessment and evaluation beginning with a chapter on the lecture cooperative
learning and teamwork The book ends with a brief insightful forecast of the future of engineering education Because this is a
practical tool and reference for engineers each chapter is self contained and may be read independently of the others Unlike

other works in engineering education which are generally intended for educational researchers this publication is written not only for researchers in the field of engineering education but also for all engineers who teach All readers acquire a host of practical skills and knowledge in the fields of learning philosophy sociology and history as they specifically apply to the process of engineering curriculum improvement and evaluation Evaluation Package for Cutnell and Johnson Physics 8E
