Scala for Machine Learning Patrick R. Nicolas, 2017-09-26 Leverage Scala and Machine Learning to study and construct systems that can learn from data About This Book Explore a broad variety of data processing machine learning and genetic algorithms through diagrams mathematical formulation and updated source code in Scala Take your expertise in Scala programming to the next level by creating and customizing AI applications Experiment with different techniques and evaluate their benefits and limitations using real world applications in a tutorial style Who This Book Is For If you re a data scientist or a data analyst with a fundamental knowledge of Scala who wants to learn and implement various Machine learning techniques this book is for you All you need is a good understanding of the Scala programming language a basic knowledge of statistics a keen interest in Big Data processing and this book What You Will Learn Build dynamic workflows for scientific computing Leverage open source libraries to extract patterns from time series Write your own classification clustering or evolutionary algorithm Perform relative performance tuning and evaluation of Spark Master probabilistic models for sequential data Experiment with advanced techniques such as regularization and kernelization Dive into neural networks and some deep learning architecture Apply some basic multiarm bandit algorithms Solve big data problems with Scala parallel collections Akka actors and Apache Spark clusters Apply key learning strategies to a technical analysis of financial markets In Detail The discovery of information through data clustering and classification is becoming a key differentiator for competitive organizations Machine learning applications are everywhere from self driving cars engineering design logistics manufacturing and trading strategies to detection of genetic anomalies The book is your one stop guide that introduces you to the functional capabilities of the Scala programming language that are critical to the creation of machine learning algorithms such as dependency injection and implicits You start by learning data preprocessing

and filtering techniques Following this you'll move on to unsupervised learning techniques such as clustering and dimension reduction followed by probabilistic graphical models such as Naive Bayes hidden Markov models and Monte Carlo inference Further it covers the discriminative algorithms such as linear logistic regression with regularization kernelization support vector machines neural networks and deep learning You'll move on to evolutionary computing multibandit algorithms and reinforcement learning Finally the book includes a comprehensive overview of parallel computing in Scala and Akka followed by a description of Apache Spark and its ML library With updated codes based on the latest version of Scala and comprehensive examples this book will ensure that you have more than just a solid fundamental knowledge in machine learning with Scala Style and approach This book is designed as a tutorial with hands on exercises using technical analysis of financial markets and corporate data The approach of each chapter is such that it allows you to understand key concepts easily

Computing and Combinatorics Bin Fu, Ding-Zhu Du, 2011-07-18 This book constitutes the refereed proceedings of the 17th Annual International Conference on Computing and Combinatorics held in Dallas TX USA in August 2011 The 54 revised full papers presented were carefully reviewed and selected from 136 submissions Topics covered are algorithms and data structures algorithmic game theory and online algorithms automata languages logic and computability combinatorics related to algorithms and complexity complexity theory computational learning theory and knowledge discovery cryptography reliability and security and database theory computational biology and bioinformatics computational algebra geometry and number theory graph drawing and information visualization graph theory communication networks and optimization parallel and distributed computing

Algorithmic Learning Theory Shai Ben David, John Case, Akira Maruoka, 2004-09-24 Algorithmic learning theory is mathematics about computer programs which learn from experience This involves considerable interaction between various mathematical disciplines including theory of computation statistics and combinatorics There is also considerable interaction with the practical empirical fields of machine and statistical learning in which a principal aim is to predict from past data about phenomena useful features of future data from the same phenomena The papers in this volume cover a broad range of topics of current research in the field of algorithmic learning theory We have divided the 29 technical contributed papers in this volume into eight categories corresponding to eight sessions reflecting this broad range The categories featured are Inductive Inference Approximate Optimization Algorithms Online Sequence Prediction Statistical Analysis of Unlabeled Data PAC Learning Boosting Statistical supervised Learning Logic Based Learning and Query Reinforcement Learning Below we give a brief overview of the field placing each of these topics in the general context of the field Formal models of automated learning reflect various facets of the wide range of activities that can be viewed as learning A first dichotomy is between viewing learning as an indefinite process and viewing it as a finite activity with a defined termination Inductive Inference models focus on indefinite learning processes requiring only eventual success of the learner to converge to a satisfactory conclusion
